This New American Red Cross CPR/AED for the Professional Rescuer Participant's Manual and course reflect changes based on the 2005 Consensus on Science for CPR and Emergency Cardiovascular Care (ECC) and the Guidelines 2005 for First Aid. Changes to this program and manual include simplifications to many of the CPR skill sequences, which helps improve retention. There have also been changes to help improve the quality of CPR.

The integration of CPR skills into the operation of AEDs had changed to help improve survival from sudden cardiac arrest. Professional rescuers are now trained to use AEDs on adults and children. Information has been updated and added to this program to help professional rescuers administer epinephrine, aspirin and fixed-flow-rate oxygen. The skills learned in this course include adult, child and infant rescue breathing, conscious and unconscious choking, CPR, two-rescuer CPR and adult and child AED. Additional training can be added to this course including bloodborne pathogens training and emergency oxygen administration. While the skills and knowledge that professional rescuers use are increasing, this training will help you meet your most important responsibility as a professional rescuer- the responsibility to save lives.

Cardiac arrest can strike a seemingly healthy individual of any age, race, ethnicity, or gender at any time in any location, often without warning. Cardiac arrest is the third leading cause of death in the United States, following cancer and heart disease. Four out of five cardiac arrests occur in the home, and more than 90 percent of individuals with cardiac arrest die before reaching the hospital. First and foremost, cardiac arrest treatment is a community issue - local resources and personnel must provide appropriate, high-quality care to save the life of a community member. Time between onset of arrest and provision of care is fundamental, and shortening this time is one of the best ways to reduce the risk of death and disability from cardiac arrest. Specific actions can be implemented now to decrease this time, and recent advances in science could lead to new discoveries in the causes of, and treatments for, cardiac arrest. However, specific barriers must first be addressed. Strategies to Improve Cardiac Arrest Survival examines the complete system of response to cardiac arrest in the United States and identifies opportunities within existing and new treatments, strategies, and research that promise to improve the survival and recovery of patients. The recommendations of Strategies to Improve Cardiac Arrest Survival provide high-priority actions to advance the field as a whole. This report will help citizens, government agencies, and private industry to improve health outcomes from sudden cardiac arrest across the United States. Rev. ed. of: First aid/CPR/AED for schools and the community. 3rd ed. c2006.

Tactical Combat Casualty Care (TCCC) has saved hundreds of lives during our nation's conflicts in Iraq and Afghanistan. Nearly 90 percent of combat fatalities occur before a casualty reaches a medical treatment facility. Therefore, the prehospital phase of care is needed to focus on reducing the number of combat deaths. However, few military physicians have had training in this area and, at the onset of hostilities, most combat medics, corpsmen, and pararescue personnel in the U.S. military have been trained to perform battlefield trauma care through civilian-based trauma courses. These courses are not designed for the prehospital combat environment and do not reflect current practices in the area of prehospital care. TCCC was created to train Soldiers and medical personnel on current best practices for medical treatment from the point of injury to evacuation to Role 3 facilities

Nearly half of all injuries in high school sports occur during practice when no athletic trainer or emergency medical personnel are present. In these instances, coaches are the first responders. As a coach, are you prepared to take action in a medical emergency? *Sport First Aid* provides high school and club sport coaches with detailed action steps for the care and prevention of more than 110 sport-related injuries and illnesses. Organized for quick reference, *Sport First Aid* covers procedures for conducting emergency action steps; performing the physical assessment; administering first aid for bleeding, tissue damage, and unstable injuries; moving an injured athlete; and returning athletes to play. The new edition features the latest CPR guidelines from the American Heart Association; guidelines for the prevention, recognition, and treatment of concussion from the Centers for Disease Control and Prevention; and guidelines for the prevention of dehydration and heat illness from the National Athletic Trainers' Association. Beyond simply treating injuries and illnesses, *Sport First Aid* seeks to prevent them from occurring in the first place. Included are strategies for reducing athletes' risk of injury or illness, such as establishing a school-based medical team, implementing preseason conditioning programs, creating safe playing environments, plann-

ing for weather emergencies, ensuring proper fit and use of protective equipment, enforcing sport skills and safety rules, and developing a medical emergency plan. Sample forms, checklists, and plans take the work out of developing these documents from scratch. With *Sport First Aid*, you and your coaching staff will be prepared to make critical decisions and respond appropriately when faced with athletes' injuries and illnesses. Produced by the American Sport Education Program (ASEP), *Sport First Aid* is the text for the ASEP Sport First Aid course, which, along with *Coaching Principles and Coaching Technical and Tactical Skills* courses, makes up the curriculum for the ASEP Bronze Level coaching certification program. For more information on ASEP courses and resources, call 800-747-5698 or visit www.ASEP.com.
