---

A directory to the universities of the Commonwealth and the handbook of their association.

The purpose of this book is to examine the performance of Guyana's economy during the era of dirigisme and the period of economic liberalisation with emphasis on a market economy, using all available micro-and macro-data. In a much broader and meaningful sense, this book deals with the socio-economic progress of Guyana from the 1960s, with heavy emphasis on the market reforms, because this is the dominant and interesting story for policy lessons in the Third World. This book also focuses on what has happened to poverty, inequality, and other social indicators during the reform period. Until now, there has not been any systematic examination of the effects of the economic reforms in Guyana on unemployment, wages and industrial activity; poverty and inequality; farmers' response to price liberalisation; education and health indicators; ethnicity and growth; and governance, crime and corruption. These issues and more are the subject matter of this book. The book refers to those aspects of Guyana's history and recent political events that bear directly on economic policy and the performance of the economic system.

It has been said before that Africa is one of the richest continents in the world but the poorest and colonialism was blamed for Africa's problems before the continent was liberated. Although some leaders still blame colonialism for the poverty that is ravaging the continent today, it cannot be denied that poor governance, corruption, greed among many other ills are causing Africa's current problems. The essays in this collection *The Gods Sleep Through It All* discusses Africa's leadership problems and how most countries still rely on former colonisers for help despite boasting of untold natural wealth. The essays discuss the corruption of political parties and politics in Africa and question why African countries readily open their arms to countries like China but close borders to people from other African countries.

Since the late 1970s, Sri Lanka has undergone a socio-economic transformation, from protectionism towards economic liberalisation and increasing integration into the world economy. Through a systematic comparison of these periods of economic change (1956–1977, and 1977 to the present), Angela W. Little and Siri T. Hettige examine the impact of this transformation on education, youth employment and equality of opportunity in Sri Lanka. The book charts Sri Lanka's shift from a predominantly agricultural economy to one dominated by services and manufacturing, a reduction in unemployment, rising educational and occupational levels, expectations and achievements, and a reduction in poverty. In turn, it reveals a growing role for the private sector and foreign interests in post-secondary education and a modest growth in private education at the primary and secondary levels, as well as widening social disparities in access to qualifications, training and skills. The Sri Lankan experience of, and engagement with, globalisation has been tempered by a long-running ethnic conflict that hindered economic and social development and diverted considerable public funds into defence and war. Now that the war is 'won', the challenge is how to invest in human resource development and the fulfilment of the expectations of youth from all ethnic and social groups. This challenge requires serious policy analysis, the generation of more state revenues, the reallocation of existing public resources, and a political commitment to the winning of a sustainable peace and stability. This book makes an important contribution to the broader international literature on the implications of globalisation for education policy and practice, and to the interaction of exogenous and endogenous forces for educational change. It deals with the tension between the high social demand for education and the growing demand for specialised skills in a changing economy. As such, it has a wide interdisciplinary appeal across education policy and politics, Asian education, South Asian society, youth policy, sociology of education, political economy of social change, and globalisation.

Basic skills tests (based on the National Standards for adult basic skills) were carried out between June 2002 and May 2003, on a sample of over eight thousand adults normally resident in England.

The tests were combined with a background questionnaire (social survey). This report provides many detailed statistics but some of the the main findings are noted below. 44 per cent of the respondents achieved Level 2 or above in the literacy assessment, but 16 per cent were classified at Entry level 3. In the numeracy test, 25 per cent achieved Level 2 or above, but 47 per cent were classified at Entry level 3 or below. Overall, 47 per cent were classified at Entry level 3 or below, in either literacy or numeracy, and only 18 per cent achieved Level 2 or above for both literacy and numeracy.

What can teachers in British and American inner-city schools learn from each other about literacy training? To explore this question, Sarah Warshauer Freedman and her British colleagues set up a writing exchange that matched classes from four middle and high schools in the San Francisco Bay area with their London equivalents. *Exchanging Writing, Exchanging Cultures* offers concrete lessons to school reformers, policymakers, and classroom teachers about the value and effectiveness of different approaches to teaching writing. Freedman goes beyond the specific subject matter of this study, looking anew at Vygotsky's and Bakhtin's theories of social interaction and addressing the larger questions of the relationship between culture and education.

Along with a summary of key ideas, techniques, and results, many chapters offer diagrams of apparatus, graphs, and tables of data. From atomic spectroscopy to applications in comets, one finds contributions from over 100 authors, all leaders in their respective disciplines. Substantially updated and expanded since the original 1996 edition, it now contains several entirely new chapters covering current areas of great research interest that barely existed in 1996, such as Bose-Einstein condensation, quantum information, and cosmological variations of the fundamental constants.
