13. Marine and Coastal Ornithology Executive Summary: Chapter 13. Marine and Coastal Ornithology The following potential impacts to waterbirds will occur either in the short-term, during quay reconstruction activities and dredging of the berth pocket,

or in the long-term, as a result of

Coastal tourism • Need to be clear about the tourism growth and potential (aspirations) • This is not business as usual. Need to identify catalytic coastal and marine tourism initiatives, interventions and projects. Example of criteria for catalyst projects: GDP potential, employment potential, social, environmental and economic contribution.

Protection Area is not disturbed unnecessarily, a Vessel Management Plan for marine ornithology will be implemented. No impacts are predicted as a result of the Operational Phase of the Proposed Project. There are also no predicted significant residual effects upon estuarine, coastal and marine ornithological receptors.

...

Review papers or Commentaries (i.e., short articles contributing new perspectives on existing publications) on important or emerging topics in marine ornithology are encouraged. Contributions dealing with coastal or water birds such as gulls, terns, cormorants, and pelicans will also be considered.

Seabirds (also known as marine birds) are birds that are adapted to life within the marine environment. While seabirds vary greatly in lifestyle, behaviour and physiology, they often exhibit striking convergent evolution, as the same environmental problems and feeding niches have resulted in similar adaptations. The first seabirds evolved in the Cretaceous period, and modern seabird families ...
