This textbook, originally by D. Annand and H. Dauderis, was intended for a first course in introductory financial accounting. It focuses on core introductory financial accounting topics that match prerequisite requirements for students advancing to Intermediate Financial Accounting. A corporate approach is utilized versus beginning with a sole proprietorship emphasis and then converting to a corporate approach; this consistency throughout the book reduces confusion for the introductory student. This most recent revision by D. Marchand converted the text from

IFRS to reflect the Generally Accepted Accounting Principles of the United States (U.S. GAAP).

This book is not a slimmed-down Accounting for Lawyers casebook, but a book especially designed as an auxiliary book for other courses that draw on accounting. It is brief, inexpensive, and gives students a plain English, sometimes even humorous, introduction to the basics of accounting and to the financial concepts of present value and expected value. It allows students to learn the essential accounting concepts outside of class so professors can spend more of valuable class time fo-

cus on the core concepts of a course. The chapters are short and modular, so professors can assign as much or as little as students need to know for a course.

Accounting for Non-Accountants is the must-have accounting guide for all of us who have never taken an accounting class, are mystified by accounting jargon and have no clue about balance sheets, income statements or statements of cash flow. Dr. Wayne Label covers it all in a style that's easy to comprehend and apply, so you can understand the accounting systems that will help your growing business succeed. Book jacket.
