## ZJH936 - GRANT PATRICK

Advanced Cancer, Metastatic Cancer, and Bone Metastasis. Advanced cancers have usually spread from where they started to other parts of the body. This is known as metastatic cancer. But not all advanced cancers are metastatic. Bone metastasis is cancer that has spread to the bone. [BackTo Top](#).

Musa is author of Advanced Breast Cancer: A Guide to Living with Metastatic Disease. She is a nationally known and respected breast cancer activist. She has consulted for American Cancer Society, National Breast Cancer Coalition, Y-Me, and many other national groups on survivor issues (providing material for web sites, booklets, videos, and in-person training).

Breast cancer stage is usually expressed as a number on a scale of 0 through IV — with stage 0 describing non-invasive cancers that remain within their original location and stage IV describing invasive cancers that have spread outside the breast to other parts of the body. How a breast cancer's stage is determined Breast cancer is the second most common cause of death from cancer in women. It is estimated that 42,260 people (41,760 women and 500 men) will die from breast cancer this year. Metastatic breast cancer will cause the vast majority of those deaths. The 5-year survival rate tells you what percent of people live at least 5 years after the cancer is found. Percent means how many out of 100. The 5-year survival rate for women with metastatic breast cancer is 27%.

Breast Cancer Topic Guide Breast Cancer : Breast cancer is the second leading cause of cancer in women. Symptoms and signs of breast cancer include breast lumps, nipple discharge or inversion, or changes in the breast's skin.

The National Comprehensive Cancer Network (NCCN), a not-for-profit alliance of leading cancer centers devoted to patient care, research, and education, is dedicated to improving the quality, effectiveness, and efficiency of cancer care so that patients can live better lives.
