ASP.NET MVC - Wikipedia

The runtime features are released as NuGet packages on the NuGet gallery. All the runtime packages follow the Semantic Versioning specification. The latest ASP.NET Web API 2.2 package has the following version: "5.2.0". You can install or update these packages through NuGet.

What's New in ASP.NET Web API 2.2 | Microsoft Docs

Web API 2.2; Introduction. This tutorial demonstrates CORS support in ASP.NET Web API. We'll start by creating two ASP.NET projects - one called "WebService", which hosts a Web API controller, and the other called "WebClient", which calls WebService.

Web API 2; See Create a web API with ASP.NET Core and Visual Studio for Windows for a newer version of this tutorial. Create a Web API Project. In this tutorial, you will use ASP.NET Web API to create a web API that returns a list of products. The front-end web page uses jQuery to display the results.

What's New in ASP.NET Web API 2.1 | Microsoft Docs

Here is the flow in the Web API 2 pipeline: Before invoking an action, Web API creates a list of the authentication filters for that action. This includes filters with action scope, controller scope, and global scope. Web API calls AuthenticateAsync on every filter

in the list.

REST APIs with .NET and C#. ASP.NET makes it easy to build services that reach a broad range of clients, including browsers and mobile devices. With ASP.NET you use the same framework and patterns to build both web pages and services, side-by-side in the same project.

How To Implement NLog In WebAPI - C# Corner

ASP.NET Web API 2: Building a REST Service from Start to ...

ASP.NET Web API is a framework that makes it easy to build HTTP services that reach a broad range of clients, including browsers and mobile devices. It is an ideal platform for building RESTful applications on the .NET Framework. This poster shows how an HTTP request flows through the Web API pipeline, and how the HTTP response flows back.

Prerequisites. Visual Studio 2017 Community, Professional, or Enterprise edition.. Configuring Web API with ASP.NET Hosting. In an ASP.NET application, configure Web API by calling `GlobalConfiguration.Configure` in the `Application_Start` method. The `Configure` method takes a delegate with a single parameter of type `HttpConfiguration`. Perform all of your configuration inside the delegate.
