Classroom Resources of Teaching about the Human Skeletal System While a classroom skeleton model would be fantastic, it's not always in the school budget. Clip art can be a fantastic resource and substitute for a full scale model. Worksheets and activities also help children embrace learning and remembering.

The skeletal system is divided into two parts: axial and appendicular skeleton. There are 5 functions of the skeletal system in the body, three external and two internal. The external functions are: structure, movement and protection. The internal functions are: blood cell production and storage.

The muscular system is responsible for the movement of the human body. Attached to the bones of the skeletal system are about 700 named muscles that make up roughly half of a person's body weight. Each of these muscles is a discrete organ constructed of skeletal muscle tissue, blood vessels, tendons, and nerves.

Skeletal System | Human Skeleton

The human skeleton is the internal framework of the human body. It is composed of around 270 bones at birth – this total decreases to around 206 bones by adulthood after some bones get fused together. The bone mass in the skeleton reaches maximum density around age 21. The human skeleton can be divided into the axial skeleton and the appendicular skeleton.
