Rivet nuts (also know as rivnuts, blind nuts or nut-serts) are internally threaded inserts, used in applications with small material (wall) thickness. They create a strong thread in thin sheets of material for high strength fastening from bolts and other threaded articles. They are easy-to-install, reliable fasteners that can provide a strong load-bearing thread into thin materials.

Made from aluminum, stainless steel, steel, brass, and Monel, rivet nuts offer a variety of benefits over bolts, self-tapping screws, and pressed inserts. In fact, rivet nuts are not impaired by heat, unlike other fasteners such as weld nuts. Many times, installing rivet nuts is just more practical in comparison to other available fasteners. 4.

Bolts have largely replaced rivets due to their lower installation cost, ease of installation and maintenance. The two types of bolts commonly used in steel construction include high strength structural steel, and A307 bolts (common bolts). Structural steel bolts are subcategorised into A325 (Group A) and A490 (Group B) and are high strength.

[Bolt Nut Screw Rivet And](#)

Rivets offer a number of advantages over threaded bolts. They won’t loosen when subjected to vibration and can secure joints with short clamp length. On the other hand, compared to threaded bolts, they are cumbersome and time consuming to install and remove, and offer limited clamp load. However, securing a threaded bolt with a Nord-Lock washer ensures resistance to vibration, and also makes it possible to secure joints with short clamp length.

Bolt (noun). A (usually) metal fastener consisting of a cylindrical body that is threaded, with a larger head on one end. It can be inserted into an unthreaded hole up to the head, with a nut then threaded on the other end; a heavy machine screw.
