... Girls start earlier, growing fastest when 12 and 13. Girls also end their growth spurt earlier at 18, while boys need another two years before they finish growing aged 20. Human body home-page

Boys Girls And Body Science A First Book About Facts Of

... The primary differentiating factor between a boy and a girl is their reproductive make-up. Abundance of testosterone in boys results in denser hair throughout the body, lower pitch voice, and leaner muscle mass. Estrogen in girls contributes to the presence of mammary glands and more pronounced fatty tissues.

a new type of science. Harbour Publishing: Boys, Girls & Body Science Graphs of the amounts of subcutaneous fat on males and females from birth to 16 years revealed that from eight years on, the curves for girls and boys diverge more radically, as do the curves for limb and body fat. At adolescence the limb fat Girls have a little more fat than boys at birth, and the difference becomes more marked during the period of loss, since girls lose less than boys. Graphs of the amounts of subcutaneous fat on males and females from birth to 16 years revealed that from eight years on, the curves for girls and boys diverge more radically, as do the curves for limb and body fat.

A teenage boy's voice can drop as much as an octave. ... BBC Science > Human Body & Mind > The Body ... Surprisingly, both girls and boys are affected by voice changes during their teenage years ...

Boys and girls are different. It seems so obvious. Yet some medical conditions may cause some of those differences to become confused. And then telling apart boys from girls can prove challenging. It's one measure of how complex human biology is. When it comes to whether someone looks like a boy or girl, hormones clearly run the show.

Researchers have long agreed girls have superior language abilities to boys, but haven't clearly provided a biological basis to account for their differences. For the first time and in unambiguous ...
