This book deals with sound craftsmanship utilising correct tools and materials. Practical advice on subjects such as frame-

work, design and construction, timberfloor construction and arch centres. Includes how-to information.

This book provides the apprentice or trainee carpenter and joiner with the basic technical knowledge necessary to complete the first half of a City and Guilds Course in Carpentry and Joinery. It will also be a useful reference to any persons studying for examinations, or simply wishing to further their knowledge in one of the associated areas, such as wood machining, cabinet making or general building construction. Dealing with the basic skills and techniques employed in

the present day construction industry, the text assumes little prior knowledge of the subject, but lays before the reader a simple, straight forward and readable out of the skills, tools, materials and methods likely to be used or encountered in the workshop, on site or during studies at home or in college.

Master the basics of house building and renovation with this handy guide-book. Step-by-step illustrations show you everything, from installing floor joists to applying asphalt shingles, hanging a door, and building a stairway.

Abstract: Alternate assessment techniques for measuring performance skills (in laboratory, factory, field, or classroom) as opposed to the traditional multiple-choice ways of testing competency are available. Guidelines are suggested for developing an assessment program and designing assessment instruments. An array of assessment techniques are divided into 6 categories: actual performance, simulations, observational, oral, paper-pencil, and program requirements. A method of integrating multiple assessment techniques to

achieve goals is introduced through the concept of the assessment center. Actual testing programs used in education, training, and the professions are described to demonstrate the usefulness of selecting the right tool for the job. (kbc).
