CHAPTER 16 EVOLUTION OF POPULATIONS  
A. Darwin's Ideas revisited - it was more than 50 years after Darwin started to develop his theory of evolution before biologists could determine how evolution takes place - about 1910, biologists realized that genes carry the information that determine traits

A B; What is a gene pool? the combined genetic information of all the members of a particular population: What is relative frequency? the number of times that an allele occurs in a gene pool compared with the number of times other alleles occur
