Sometimes the term "overtone" is used to describe the harmonic frequency produced by a musical instrument. The "first" overtone is the first harmonic frequency greater than the fundamental. If we had an instrument producing the entire range of harmonic frequencies shown in the table above, the first overtone would be 2000 Hz (the 2nd harmonic), while the second overtone would be 3000 ...

Chapter 7 | Instructor and Student (Divergent story)

Chapter 7 is about the modeling, chapter 8 is about analysis of our models, and chapter 9 continues analysis for the feedback system and then discusses how to design the feedback system using the models from this chapter. So our models of the power converter need to predict how AC variations in things like the input voltage or the load or the duty cycle affect the output voltage under transient and not DC conditions.
