European urinalysis guidelines have pro-

posed to examine particles < 1 hour after voiding at ambient temperature or < 4 hours if refrigerated to avoid material lysis. Refrigeration causes a precipitation of phosphates and urates, which may affect analysis of these analytes.

The 2014 CLSI guidelines retained the current MICs for cefazolin against enterobacteriaceae, but specified that susceptible results were based on a dosing regimen of 2 grams intravenously every 8 h and is specific for non-urine isolates . One of the major changes included in these guidelines involves the reporting of a urine-specific ce-

fazolin MIC for enterobacteriaceae (susceptible ≤ 16 mcg/mL).
