For copper alloys, such as bronze, exposure to chlorides leads to green, while sulfur compounds (such as "liver of sulfur") tend to brown. The basic palette for patinas on copper alloys includes chemicals like ammonium sulfide (blue-black), liver of sulfur (brown-black), cupric nitrate (blue-green) and ferric nitrate (yellow-brown).

[Colouring, Bronzing and Patination of Metals, The | BK978](#)

Patination is a way of coloring metal, using the chemistry of the metal itself to create colored oxides,

chlorides, etc. It's a controlled form of corrosion, usually for decorative effect, but sometimes to put a protective layer on the metal. Outdoor copper and bronze show some of the greens and browns that are possible.
