Authoritative and readable, this book is the first historical overview of US federal tax systems published since 1967. Its coverage extends from the ratification of the Constitution to the present day. Brownlee describes the five principal stages of federal taxation in relation to the crises that led to their adoption - the formation of the republic, the Civil War, World War I, the Great Depression, and World War II - and discusses the significant modification during the Reagan presidency of the last stage. Brownlee also addresses the proposals made since the fall of 1994 congressional elections under the 'Contract with America' and competing schemes, and he assesses today's conditions for a tax revolution in the light of the national emergencies that have produced revolutions in the past. While focusing on federal policy, Brownlee also attends to the related history of state and local taxation.

The topics of double non-taxation and hybrid entities have acquired a particular importance in a context where transformations within the tax world seem to be leading to an international commitment most materially manifested in the OECD Base Erosion and Profit Shifting (BEPS) project. In what is the first systematic in-depth critique of the BEPS Action Plan 2 with regard to hybrid entities, this timely book provides a critical review of the OECD's approach and proposes a deeply informed alternative method based on the tax policy aims of simplicity, coherence and ease of administration. The author analyses the interaction between the double non-taxation outcome and the use of hybrid entities in an approach not strictly linked to any specific tax jurisdiction. To this end, the analysis includes case studies and examples from a range of jurisdictions emphasizing the international tax context, including the application of tax treaties. Among the seminal matters covered are the following: - foundations of the concepts of double non-taxation and hybrid entities, absent of the specific limitations of domestic tax legislation; - extensive analysis based on the rules of characterization of foreign entities for tax purposes in the United States, Spain, Denmark and Germany, as well as on the Poland/United States and Canada/United States tax treaties; - detailed analysis on the implications of Article 1(2) OECD Model Tax Convention and Article 3(1) Multilateral Instrument, especially having in mind the position of developing (source) countries; and - EU tax law as part of the international context, including an extensive analysis on the EU Anti-Tax Avoidance Directive (ATAD) I and ATAD II. Detailed comparisons between the author's proposal and other existing rules elucidate common points and deviations. If merely for its unparalleled clarification of the issues, this book will prove of immeasurable value to practitioners, tax authorities, policymakers and academics concerned with international tax law. Beyond that, as an authoritative guide that promises to reorient the discussion to what really matters in the debate regarding double non-taxation and hybrid entities, this analysis elaborates solutions applicable to a generality of cases worldwide, and thus hugely promotes the urgent quest for alternative solutions.

The major sources of federal tax revenue are individual income taxes, Social Security and other payroll taxes, corporate income taxes, excise taxes, and estate and gift taxes. This report describes the federal tax structure, provides some statistics on the tax system as a whole, and presents analysis of selected tax concepts. The federal income tax is levied on an individual's taxable income, which is adjusted gross income (AGI) less deductions and exemptions. Tax rates, based on filing status (e.g., married filing jointly or single individual) determine the level of tax liability. Tax rates in the United

States are progressive, such that higher levels of income are taxed at higher rates. Once tax liability is calculated, tax credits can be used to reduce tax liability. Tax deductions and tax credits are tools available to policymakers to increase or decrease the after-tax price of undertaking specific activities. Individuals with high levels of exemptions, deductions, and credits relative to income may be required to file under the alternative minimum tax (AMT). Corporate taxable income is also subject to varying rates, where those with higher levels of income pay higher levels of taxes. Social Security and Medicare tax rates are, respectively, 12.4% and 2.9%. In 2014, Social Security taxes are levied on the first \$117,000 of wages. In 2015, the Social Security wage base is inflation-adjusted to \$118,500, reflecting increases in average wages in the economy. Medicare taxes are assessed against all wage income. Federal excise taxes are levied on specific goods, such as transportation fuels, alcohol, tobacco, and telephones. In FY2013, individual income taxes accounted for 47% of total federal revenue. Social Security taxes accounted for 34%. Corporate income taxes accounted for 10% while excise taxes accounted for 3%. Estate and gift, customs, and miscellaneous taxes accounted for the remaining 6% of total revenue. Over time, the corporate income tax has become much less important as a revenue source while Social Security taxes have provided a larger share of total revenues. Analysis of tax statistics from the federal tax system as a whole leads to three conclusions: (1) federal revenue as a percentage of GDP is in line with historical trends; (2) the U.S. fiscal position is in line with the fiscal position of other industrialized nations (revenues and expenditures as a percentage of GDP are relatively low); and (3) over the past decade, average tax rates have fallen for individuals at all income levels, but have fallen more for lower-income individuals, reducing their share of overall tax liabilities. The final sections of this report analyze a number of tax concepts. Tax expenditures are revenue losses from special tax deductions, credits, and other benefits. Capital gains warrant special attention, as there is debate about their being taxed at a lower rate.

Marriage tax penalties and bonuses, while reduced following legislation enacted in 2001 and 2003, still pose an inequity in the tax system. Tax deferral, or the timing of taxes, poses problems related to the timing of taxation, specifically with respect to capital gains. Depreciation is important, as accelerated depreciation schemes or expensing can influence firm behavior. Tax liability also depends on form of business organization. Finally, the issue of whether taxes can influence firms' competitiveness is reviewed.
