In Consciousness and the Brain, Dehaene delves into his own lab's work and the work of other neuroscientists to share what we do and don't about our minds and our consciousness.

The experiments covered in the book concern discovering reproducible signals of consciousness in the brain. These are part

of the Global Neuronal Workspace - the sharing of important information throughout the brain. And consciousness has a role in the computational economy of the brain and global information sharing.

Many of the ideas and experiments discussed in the lecture could be traced back to Dehaene's recently published book, Consciousness and the Brain: Deciphering How the Brain Codes Our Thoughts 1. The book received many accolades from fellow scientists, including that of the Nobelist Eric Kandel.
