CorelDRAW is a graphics and drawing program that is vector-based and developed by a software company based in Ottawa called Corel. When you sketch an object on the CorelDRAW drawing page using the tools that are available, a mathematical formula determines the structure of the object that is displayed on the screen.

CorelDRAW allows you to do most of the same things that you can do with Illustrator, and a lot of times it comes down to personal preference. Illustrator is more powerful but also comes with a steeper learning curve. Some designers prefer to buy software outright rather than paying a recurring subscription.
