HYDRAULIC STRUCTURES A hydraulic structure is a structure submerged or partially submerged in any body of water, which disrupts the natural flow of water. They can be used to divert, disrupt or completely stop the flow. An example of a hydraulic

structure would be a dam, which slows the normal flow rate of river in order to power turbines. A

Hydraulics Lectures and Class Notes Free Download. Hydraulics is a technology and applied science using engineering, chemistry, and other sciences involving the mechanical properties and use of liquids or fluids. At a very basic level, hydraulics is the liquid version of pneumatics. Fluid mechanics provides the theoretical foundation for hydraulics, which focuses on the applied engineering using the properties of fluids.

The Role of Hydraulic Design Engineers - A hydraulic engineer determines and plans the plumbing and hydraulic and plumbic design of a project, be it a housing project or a commercial project. The hydraulic design encompasses a number of fields in-
