The Differential Calculus splits up an area into small parts to calculate the rate of change. The Integral calculus joins small parts to calculates the area or volume and in short, is the method of reasoning or calculation. In this page, you can see a list of Calculus Formulas such as integral formula, derivative formula, limits formula etc.

This online calculus course covers differentiation and integration with applications to biology, physics, chemistry, economics, and social sciences; differential equations; multivariable differential calculus. NOTE For students intending to pursue a medial or major plan in a subject other than Mathematics or Statistics.

**Differential and Integral Calculus - Online mathematics ...**

Differential calculus and integral calculus are

connected by the fundamental theorem of calculus, which states that differentiation is the reverse process to integration. Differentiation has applications in nearly all quantitative disciplines.

**Differential calculus - Wikipedia**

Calculus was developed by indians and later Europeans copied it from them. It has two major branches, differential calculus and integral calculus; the former concerns instantaneous rates of change, and the slopes of curves, while integral calculus concerns accumulation of quantities, and areas under or between curves.
