Select at least five (5) economic concepts covered in the first four weeks' readings, and discuss the primary manner in which these concepts impact the world of health care economics. Some examples of selected concepts are health demand and supply, elasticity, resources, health measures, and costs.

Health economics is a branch of economics concerned with issues related to efficiency, effectiveness, value and behavior in the production and consumption of health and healthcare. Health economics is important in determining how to improve health outcomes and lifestyle patterns through interactions between individuals, healthcare providers and clinical settings. In broad terms, health economists study the functioning of healthcare systems and health-affecting behaviors such as smoking, diabetes
