This type of Application of environmental Biotechnology gives response to a chemical that helps to measure the level of damage caused or the exposure of the toxic or the pollution effect caused. In other word, Biomarker can also be called as the Biological markers the major use of this applications helps to relate the connection between the oils and its sources.

Environmental Biotechnology: theory and application takes a thematic and environmentally focused approach, and breaks away from traditional rigid divisions to provide a unified exposition of the subject and an accurate reflection of environmental biotechnology in current practice. Economic theory suggests that, if the "Biotechnology Revolution" is left to market forces alone, there will be neglected public goods. Theory and limited empirical evidence suggests that there are significant incentives for private firms to discount and neglect negative environmental impacts and to develop products that meet only the needs of those able and willing to pay.
