Whatever methods are chosen, the focus of impact assessment has evolved from generating a list of potential impacts on selected environmental components. Today's methods consider the environment to be a dynamic, integrated group of natural and social systems. Impacts occur over time and space. Some impacts are immediate while others

are delayed.
Environmental impact assessment (EIA) is a tool to aid environmental decision making . It is a process that allows for public involvement when positive and negative impacts (opportunities and constraints) that are associated with a proposed course of action are assessed . The aim of this
Secondary data are those collected over the years that can be used to understand the existing environmental scenario of the study area. The environmental impact assessment (EIA) studies are conducted over a short period of time and therefore the understanding of the environmental trends, based on a few months of primary data, has limitations.
