The self-publishing journey isn't always easy or cheap. Some things—like editing and cover design—should be left to paid professionals, but you can save money and achieve great results for matting your own e-book. DIY e-book formatting may seem daunting, but new tools—paid and free—make it fairly easy for most fiction manuscripts. These tools are discussed early in this guide so you will have a short read if one of them works for you. If your manuscript is more complicated (e.g., a nonfiction book with tables, list items, images, footnotes, and other specially formatted elements), this guide will explain everything you need to produce a professional and pleasing e-book. Advanced formatting is accomplished with HTML and CSS, but you won't need any prior experience or knowledge of either of these as the guide includes a tutorial to teach you everything you need to know. The end result of using this book will be a well-formatted EPUB e-book that can be submitted to Amazon, Apple, Kobo, Nook, and any other e-book publishing platform (NOTE: if you are looking at other guides that mention needing a MOBI file for Amazon, you are looking at an outdated guide as that is no longer best practice). Here are some specific things that you will get from reading this book. 1. A discussion of some useful tools, including Atticus, BBEdit, BlueGriffon, Calibre, Draft2Digital, Jutoh, Kindle Create, Kindle Previewer, LibreOffice Writer, Notepad++, Online HTML editors, Reedsy Book Editor, and Vellum. 2. Pluses and minuses of using Microsoft Word. 3. How to create a standard, clickable table of contents. 4. How to create a "logical" table of contents (used for the "Go To" menu or sidebar on your e-reading device or app). 5. HTML and CSS (styling) basics and a look at specific issues that are relevant to e-books and Amazon Kindle e-books in particular. 6. A template with HTML and CSS code that should work for any type of book formatting need. 7. How to create "standard" paragraph styles for different types of books. 8. How to add drop caps or small caps to your initial chapter paragraphs. 9. How to format complex elements such as internal and external links, images, tables, list items, block quotations, special fonts, and more. 10. How to create a final EPUB document (with proper metadata and cover art) from your original document or from an HTML version. 11. How to check your final EPUB for errors before submitting to online publishers. 12. An appendix summarizing the author's personal process to use as a quick checklist reference.

JEmbedAll is a Joomla component and plugin the you can purchase from <http://www.goldengravel.eu>, something you can add to your website and start embedding videos, images and more other features to your site. The role of the component is mainly to configure the data you are embedding using the plugin, but it also offer support for downloading files and generating ebooks. The package it's easy to configure and to work with. Some features have to be configured (there is a configuration section just for that in the backend) in order to be embedded and used properly in the frontend, other features are integrated and you just used them as they are. Even so, you may set some details right using the CSS attached to the predefined or user-defined strings used for embed code on your Joomla site. Purchase it and download the package for your Joomla version, then install it in order to have a powerful tool to embed videos (from YouTube, Google, Vimeo, Metacafe, Veoh, Dailymotion, RedTube and others), documents, images and

Google forms used for quiz. You can also embed Facebook pages, plugins, images and videos, Community Builder advanced searches, Prezi and Scribd documents. Starting with the 1.3 version you can configure and embed any number of conditional forms and you can configure the Open Graph protocol and Twitter cards data, with all the data and thumbnails ready for Facebook and all the sites. The online manual and the generated ebook based on it are very detailed about each feature, but you can always ask questions when you don't understand something or they are not clear enough. The only condition to embed the videos and files is that they have to be online: upload your videos on YouTube or Vimeo (for example) and upload your files (the documents can be Portable Document Format - PDFs, Word docs, Power Point, SpreadSheets and any other documents recognized by Google Docs) on your server or Google servers and embed them into your sites. The path of the document does not have to be some on docs.google.com (but that works fine), it works as well they are on any other website but you have to enter the full path of the file. You can define, configure and embed any number of jQuery images sliders into your site. You can define and use any number of Popups on your Joomla site. You can embed Google maps and direction into your site. You can define and configure file packages (they can contain any number of files) the visitors can download for free or for money (Paypal payment included!). You can define, configure and embed Community Builder advanced searches (this component works with any CB version!). Since JEmbedAll version 1.3 the search results can open in the same window, in a different window or in a modal window. Beyond that, you can give every user several powerful tools: they can save the search forms and search results, they can embed that saved search results as users lists, they can use CB privacy - a tool that restricts access to some fields, or even the users, on searches. You can embed Facebook pages, posts, videos and images (depending on the Facebook privacy - in many cases all this have to be public for everyone to see), but you can also embed some plugins (Facebook activity, comments, facepile, likebox and recommendations). Starting with the 1.5 version you can generate and download e-books based on your website content. The Paypal payment was modified and extended: you can create shopping carts for files you want sell and the generated e-books.
