Extreme Programming teams work in a strict priority order. Features to be developed are prioritized by the customer (Scrum's Product Owner) and the team is required to work on them in that order. By contrast, the Scrum product owner prioritizes the product backlog but the team determines the sequence in which they will develop the backlog items.

Agile, Scrum, and CMMI. The default processes differ mainly in the work item types (WITs) they provide for planning and tracking work. Scrum is the next most light-weight. Agile supports many Agile method terms, and CMMI, which stands for Capability Maturity Model Integration, provides the most support for formal processes and change management.
