The octane number of gasoline is a measure of its resistance to knock. The octane number is determined by comparing the characteristics of a gasoline to isooctane (2,2,4-trimethylpentane) and heptane. Isooctane is assigned an octane number of 100. It is a highly branched compound that burns smoothly, with a little knock.

Engine Coolant Temperature (ECT) should reach operating temperature, preferably 190/F or higher. If the ECT is too low, the PCM may richen the fuel mixture to compensate for a (perceived) cold engine condition. Intake Air Temperature (IAT) should read ambient temperature or close to underhood temperature, depending on the location of the sensor. In the case of a cold engine check/Key On Engine Off (KOEO)/the ECT and IAT should be within 5/F of each other.
