Each endpoint has different networking and SSL requirements and must be set up

as a separate virtual server in the F5 BIG-IP LTM. Additionally, each endpoint provides a different URI endpoint, and therefore requires different configuration for availability monitoring.

A listener is a specialized virtual server that passively checks for DNS packets on port 53 and the IP address you assign to the listener. When a DNS query is sent to the IP address of the listener, BIG-IP GTM either handles the request locally or forwards the request to the appropriate resource.
