While bamboo can be used for tensile reinforcement, the tensile strength is a small fraction of steel and load bearing beams built with it must be very deep.

Optical fiber - Wikipedia

An optical fiber is a flexible, transparent fiber made by drawing glass or plastic to a diameter slightly thicker than that of a human hair. Optical fibers are used most often as a means to transmit light between the two ends of the fiber and find wide usage in fiber-optic communications, where they permit transmission over longer distances and at higher bandwidths (data rates) than electrical ...

Ministry of Communications exists to facilitate the development of a reliable and cost effective world-class communications infrastructure and services, driven by appropriate technological innovations to enhance the promotion of economic competitiveness in a knowledge-based environment.
