That's why the Siemens flow portfolio includes a wide range of measurement technologies along with all the options you need to fully customize and optimize your installation. Add in expert service anywhere in the world 7 days a week, 24 hours a day - not to mention easy integration into the Totally Integrated Automation (TIA) platform - and the choice is clear.

Flow Measurement Devices S

Achieve Precision Flow Measurement and Process Control Flow Measurement is the process of measuring fluid in your plant or industry. You can measure flow through a variety of different devices such as Coriolis, differential pressure, vortex, magnetic, ultrasonic, turbine and positive displacement meters.

Kinds and units of measurement. Both gas and liquid flow can be measured in physical quantities of kind volumetric or mass flow rates, with units such as liters per second or kilograms per second, respectively. These measurements are related by the material's density. The density of a liquid is almost independent of conditions.

Flow Measuring Devices: Types of Flow Meters and their Applications Flow Measuring Device # 1. The Venturimeter: A Venturimeter is a device meant for measuring the quantity of a liquid flowing through a pipe. In its simplest form, the device consists of a short converging section leading to a throat and followed by a diverging section.

In a differential pressure drop device the flow is calculated by measuring the pressure drop over an obstructions inserted in the flow. The differential pressure flow meter is based on the Bernoulli Equation where the pressure drop and the further measured signal is a function of the square flow speed.

The peak expiratory flow (PEF), also called peak expiratory flow rate (PEFR), is a person's maximum speed of expiration, as measured with a peak flow meter, a small, hand-held device used to monitor a person's ability to breathe out air. It measures the airflow through the bronchi and thus the degree of obstruction in the airways. Peak expiratory flow is typically measured in units of liters ...

Peak expiratory flow - Wikipedia

A flow meter is a device used to measure flow rate (volumetric or mass) or the quantity of fluids passing through a pipe. What is the Purpose of a Flow Meter? A flow meter is used in different types of applications to measure the volumetric flowrate or mass flowrate. The specific application defines the type and capacity of the flow meter.
