Flue-Liner-Installation-Guide-Fluesupplies.com

When installing a new twinwall flue system, if the flue exits the roof within 600mm (horizontally) from the ridge (high point) of the roof then the flue must extend a minimum of 600mm above the ridge. If the flue exits the roof further down then it must extend high enough to achieve 2.3m of horizontal clearance.

flexible flue liner installation. Typical Log Burner installation inside a chimney void requires: • Vitreous enamel flue pipe from the stove (with or without access door) • Vitreous to liner adaptor (MA Adaptor) or a vitreous to liner increasing adaptor (MR Adaptor) • Flexible Flue liner • Top plate, Clamp, protection sleeve and rain cap
