~~Foundations of Time-Frequency Analysis | Karlheinz ...~~

The history of time-frequency analysis dates back to John von Neumann, Eugene Wigner, and Dennis Gabor, who considered the problems in both quantum mechanics and information theory. For many years, time-frequency analysis has been the domain of engineers in signal and image processing. Recently, however, time-frequency analysis has crossed over into the mathematical community.

Time-frequency analysis is a modern branch of harmonic analysis. It comprises all those parts of mathematics and its applications that use the structure of translations and modulations (or time-frequency shifts) for the analysis of functions and operators. Time-frequency analysis is a form of local Fourier analysis that treats time and frequency simultaneously and symmetrically. My goal is ...
