The number of hidden layers is highly dependent on the problem and the architecture of your neural network. You're essentially trying to Goldilocks your way into the perfect neural network architecture - not too big, not too small, just right. Generally, 1-5 hidden layers will serve you well for most problems.

Other RNN Architectures . Need for a Neural Network dealing with Sequences. Before we deep dive into the details of what a recurrent neural network is, let's ponder a bit on if we really need a network specially for dealing with sequences in information. Also what are kind of tasks that we can achieve using such networks.
