A New York Review Books Original Hav is like no place on earth. Rumored to be the site of Troy, captured during the crusades and recaptured by Saladin, visited by Tolstoy, Hitler, Grace Kelly, and Princess Diana, this Mediterranean city-state is home to several architectural marvels and an annual rooftop race that is a feat of athleticism and insanity. As Jan Morris guides us through the corridors and quarters of Hav, we hear the mingling of Italian, Russian, and Arabic in its markets, delight in its famous snow raspberries, and meet the denizens of its casinos and cafés. When Morris published *Last Letters from Hav* in 1985, it was short-listed for the Booker Prize. Here it is joined by *Hav of the Myrmidons*, a sequel that brings the story up-to-date. Twenty-first-century Hav is nearly unrecognizable. Sanitized and monetized, it is ruled by a group of fanatics who have rewritten its history to reflect their own blinkered view of the past. Morris's only novel is dazzlingly sui-generis, part erudite travel memoir, part speculative fiction, part cautionary political tale. It transports the reader to an extraordinary place that never was, but could well be.

Seventy-five percent of processed foods on supermarket shelves—from soda to soup, crackers to condiments—contain genetically engineered ingredients. The long-term effects of these foods on human health and ecology are still unknown, and public concern has been steadily intensifying. This new book from the Council for Responsible Genetics gathers the best, most thought-provoking

essays by the leading scientists, science writers, and public health advocates. Collectively, they address such questions as: Are GM foods safe and healthy for us? Will GM food really solve world hunger? Who really controls the power structure of food production? Are GM foods ecologically safe and sustainable? Why is it so difficult to get GM foods labeled in the US? What kinds of regulations and policies should be instituted? How is seed biodiversity, of lack thereof, affecting developing countries? Should animals be genetically modified for food? How are other countries handling GM crops? Ultimately, this definitive book encourages us to think about the social, environmental, and moral ramifications of where this particular branch of biotechnology is taking us, and what we should do about it.

This book makes Relevance Theory (RT) relevant for L2 teachers and L2 teacher educators, in particular those working in foreign language teaching contexts. L2 classroom discourse data collected in seven research projects in the years 1984 - 2004 are reinterpreted in this book in the light of Relevance Theory - a theory of interpretation of the incoming messages. In this perspective the teachers' input for instructed L2 learners facilitates shifts in the learners' attention from meaning to form and vice versa. Such shifts of attention, according to Relevance Theory, change the level of expected optimal relevance of classroom communication, either focusing the students on form-oriented communication (accuracy), on meaning-oriented communication (fluency) or on meaning and form-oriented communication (fluency combined with accuracy). The latter is considered optimal for L2 learning/acquisition. Apart from the main focus on the relevance-theoretic interpretation of the teachers' input, the book presents an overview of other theoretical approaches to the question of input for instructed L2 learners: the SLA approach, the communicative L2 teaching perspective, and the L2 classroom discourse approach.
