Pop Music Production delves into academic depths around the culture, the business, the songwriting, and most importantly, the pop music production process. Phil Harding balances autobiographical discussion of events and relationships with academic analysis to offer poignant points on the value of pure popular music, particularly in relation to BoyBands and how creative pop production and songwriting teams function. Included here are practical resources, such as recording studio equipment lists, producer business deal examples and a 12-step mixing technique, where Harding expands upon previously released material to explain how 'Stay Another Day' by East 17 changed his approach to mixing forever. However, it is important to note that Harding almost downplays his involvement in his career. At no point is he center

stage; he humbly discusses his position within the greater scheme of events. Pop Music Production offers cutting-edge analysis of a genre rarely afforded academic attention. This book is aimed at lecturers and students in the subject fields of Music Production, Audio Engineering, Music Technology, Popular Songwriting Studies and Popular Music Culture. It is suitable for all levels of study from FE students through to PhD researchers. Pop Music Production is also designed as a follow-up to Harding's first book PWL from the Factory Floor (2010, Cherry Red Books), a memoir of his time working with 1980s pop production and songwriting powerhouse, Stock Aitken Waterman, at PWL Studios.

The Routledge Companion to Music, Technology, and Education is a comprehensive resource that draws together burgeoning research on the use of technology in music education around the world. Rather than following a procedural how-to approach, this companion considers technology, musicianship, and pedagogy from a philosophical, theoretical, and empirically-driven perspective, offering an essential overview of current scholarship while providing support for future research. The 37 chapters in this volume consider the major aspects of the use of technology in music education: Part I. Contexts. Examines the historical and philosophical contexts of technology in music. This section addresses

themes such as special education, cognition, experimentation, audience engagement, gender, and information and communication technologies. Part II. Real Worlds. Discusses real world scenarios that relate to music, technology, and education. Topics such as computers, composition, performance, and the curriculum are covered here. Part III. Virtual Worlds. Explores the virtual world of learning through our understanding of media, video games, and online collaboration. Part IV. Developing and Supporting Musicianship. Highlights the framework for providing support and development for teachers, using technology to understand and develop musical understanding. The Routledge Companion to Music, Technology, and Education will appeal to undergraduate and post-graduate students, music educators, teacher training specialists, and music education researchers. It serves as an ideal introduction to the issues surrounding technology in music education.
