We might have often heard of this popular old saying that a jack of all could become the master of none. This is indeed a fact, some really experienced man might have said this because he might have tried his hands in all places he could which resulted from him becoming ultimately a master in none. Whenever we read motivational quotes and motivational speeches from all the great people in the world, we are advised to focus. That means we should concentrate on doing one specific thing where we want to achieve, and it helps. In fact, I have experienced and advised my juniors to do the same. I use to tell them that now you are a beginner and find yourself nowhere but as soon you spend a decade in a skill, an industry, a field of study, a sport, a profession, a business, or simply practicing a hobby; you reach somewhere and nobody in this world can take it away from you be it anywhere on this planet or elsewhere. Teachers deliver a lecture from half an hour to more but it is always the self-study, the amount of study you do without being told by anybody; it makes you the man you want to be in the future. The teacher (or Guru) again helps you to focus on one thing while there are millions of parallel events going around the world to lose your focus and waste your time. You might find yourself succeeding in various distinct fields, yes it is very much possible. Humans can create and extend the boundaries themselves but then you often find yourself not the number one. You could be good but can't be the best in the world in everything, there is always someone practicing the same skills and getting better than you in some part of the world and it should be appreciated with acceptance. And, here what this popular saying makes sense is that the Jack of all is a Master of None. But my all-loving readers I would like to share my story here where I grew up learning this phrase in schools and from my parents. During my interaction with the portion of the world in form of the people that I met, I found this phrase made sense, and sometimes it did not. A millennial like me always look for a modification of complex things and truths of life and death to make it simple. My late father who was a businessman used to tell his employees that in this competing World one has to be an all-rounder moreover has to master one particular skill to stand out in the crowd or must say simply survive. Luckily, I was there in his office to hear him telling this to some employee. I was very young when he left this world and all of a sudden I had a different perspective on life. Cheating people, telling lies for small profits of money, frauds, bullying, sexual exploitation, grudges over communities, body shaming, superstition, greediness, impersonation, racial discrimination, depression, and much more that exists on earth and we often ignore it while people have justifications for it. I know already there are a number of books and educating videos available out there then why I am writing this one? Because this is my journey of learning ten different skills after the death of my father and I earned a little or more amount of money utilizing these skills. I could be a victim or a

guilty while all above said evils surrounding me, but I was guided well by my mentors, parents, and elders moreover, I accepted that guided path and followed it to get benefited out of it and become an example that the world could learn from, a good example probably. With changes in time and situations, now if a father teaches his son driving a car it won't make a skill worth enough to make a living. Since now most of the people work from home moreover most of the people know themselves that how to drive a car. People need to learn more skills for a better tomorrow. My father uses to take a walk with me in the evening after dinner when he uses to tell me how children make their parents proud or shamed out of their doings. I hope this reached out to him somehow in a good way. ~ CHANAKYA SHUKLA

SAP ABAP (Advanced Business Application Programming) offers a detailed tutorial on the numerous features of the core programming platform, used for development for the entire SAP software suite. SAP ABAP uses hands on business oriented use cases and a valuable dedicated e-resource to demonstrate the underlying advanced concepts of the OO ABAP environment and the SAP UI. SAP ABAP covers the latest version (NetWeaver 7.3 and SAP application programming release 6.0) of the platform for demonstrating the customization and implementation phases of the SAP software implementation. Void of theoretical treatments and preoccupation with language syntax, SAP ABAP is a comprehensive, practical one stop solution, which demonstrates and conveys the language's commands and features through hands on examples. The accompanying e-resource is a take off point to the book. SAP ABAP works in tandem with the accompanying e-resource to create an interactive learning environment where the book provides a brief description and an overview of a specified feature/command, showing and discussing the corresponding code. At the reader's option, the user can utilize the accompanying e-resource, where a step-by-step guide to creating and running the feature's object is available. The presentation of the features is scenario oriented, i.e. most of the features are demonstrated in terms of small business scenarios. The e-resource contains the scenario descriptions, screen shots, detailed screen cams and ABAP program source to enable the reader to create all objects related to the scenario and run/execute them. The underlying concepts of a feature/command are conveyed through execution of these hands-on programs. Further exercises to be performed independently by the reader are also proposed. The demonstration/illustration objects including the programs rely on some of the SAP application tables being populated, for example an IDES system which is now a de facto system for all SAP training related activities.

The Spring framework is growing. It has always been about choice. Java EE focused on a few technologies, largely to the detriment of alternative, better solutions. When the Spring framework debuted, few would have agreed that Java EE represented the best-in-breed architectures of the day. Spring debuted to great fanfare, because it sought to simplify Java EE. Each release since marks the introduction of new features designed to both simplify

and enable solutions. With version 2.0 and later, the Spring framework started targeting multiple platforms. The framework provided services on top of existing platforms, as always, but was decoupled from the underlying platform wherever possible. Java EE is still a major reference point, but it's not the only target. OSGi (a promising technology for modular architectures) has been a big part of the SpringSource strategy here. Additionally, the Spring framework runs on Google App Engine. With the introduction of annotation-centric frameworks and XML schemas, SpringSource has built frameworks that effectively model the domain of a specific problem, in effect creating domain-specific languages (DSLs). Frameworks built on top of the Spring framework have emerged supporting application integration, batch processing, Flex and Flash integration, GWT, OSGi, and much more.
