These days, virtually all RTTY is done by the computer/soundcard combination. Amateurs (hams) use 45 baud (the speed) with 170Hz shift (between mark and space). Commercial stations use 50 or 100 baud with shifts of 425 or even 850Hz. Most software caters for differing speeds and shifts. Unlike most digital modes, RTTY is transmitted on LSB.

How-to: Amateur Radio Digital Modes: Page 1 Getting Started. In this article, we explore the fascinating world of HF digital commu-

nications. Nowadays, there are many digital modes that do not need an expensive interface or modem.

Additional modes made possible with a digital ham radio include digital radioteletype (RTTY), Voice Over IP , and TCP/IP-based packet radio, among others. RTTY has largely replaced older radiotelegraphy methods, like Morse Code, for non-verbal communication over radios, though Morse still has a dedicated following among purists.
