Hedge Of Wild Almonds South

This tree is famous in South Africa for being used to make Van Riebeeck's Hedge, the first formal boundary marker between the new Cape colony and the indigenous people of the Cape. Description The wild almond is most often a large, spreading multi-stemmed shrub to 5 m or a sturdy, well-shaped evergreen tree to 15 m.

The Eight Years of Jan Van Riebeeck in South Africa ...

Hedge of Wild Almonds addresses these Quaker concerns. Hope-Hay Hewison is both a British Quaker and a person with deep roots in South Africa, and the book reflects her wide knowledge of both sides of the subject matter. Others have written on various aspects of British Quaker attitudes toward the Boer War (e.g., Richard A. Rempel in this journal, vol. 64, no.

Brabejum - Wikipedia

The deeper parts of the Liesbeeck River were also used as part of the defence. As construction was taking too long a hedge of indigenous Wild Almond trees was planted between the Liesbeeck River and Kirstenbosch, this became known as Van Riebeeck's Hedge. Today some of these Wild Almond Trees still stand at Kirstenbosch, and serve as a reminder of past disputes over land. While apartheid was still "officially" a long time coming, for some this barrier symbolises its beginnings. About ...

In 1660 Van Riebeeck ordered new defences to be built, including the planting of a Wild Almond (*Brabejum stellatifolium*) hedge around the perimeter of the settlement, encompassing an area of about 6 miles by two. The Wild Almond is a member of the Protea family and closely related to the Australian Macademia Tree.

It's not a beautiful tree and it is most famous for its ability to form a hedge, in particular one dividing the Dutch settlers in Cape

Town from those living in South Africa prior to their arrival. Ghoes - the almond shaped fruits covered in brown velvety hairs - are collected and eaten by the local people of the Cape Town region, the Khoikhoi. Despite the English name of Wild Almond the fruits are poisonous.
