In an article from 2011, InfoQ reports Google's testing department is relatively small for the amount of developers but works well because, like Facebook, every engineer is responsible for their own code's tests. Google's achieved this by creating a culture of testing, and not an abstract, disconnected testing department.

Quality is not equal to test; it is achieved by putting development and testing into a blender and mixing them until one is indistinguishable from the other. At Google this is exactly our goal: to merge development and testing so that you cannot do one without the other. Build a little and then test it. Build some more and test some more.

How Google Tests Software contains the core information about what it means to be a Google tester and how we approach the problems of scale, complexity, and mass usage. There is information here you won't find anywhere else, but if it is not enough to satisfy your craving for how we test, there is more available on the Web.

The Google testing strategy has never changed but the tactical ways we execute it has evolved as the company has evolved. We're now a search, apps, ads, mobile, operating system, and so on and so forth company. Each of these Focus Areas (as we call them) have to do things that make sense for their problem domain.

User focused testing is the job of the Google TE. Assuming that the SWEs and SETs performed module and feature level testing adequately, the next task is to understand how well this collection of executable code and data works together to satisfy the needs of the user. TEs act as a double-check on the diligence of the developers.

How Google Tests Software - Part Four. Crawl, walk, run. One of the key ways Google achieves good results with fewer testers than many companies is that we rarely attempt to ship a large set of features at once. In fact, the exact opposite is often the goal: build the core of a product and release it the moment it is useful to as large a crowd as feasible, then get their feedback and iterate.

Software Testing is a Focus, Not a Team. As Google’s team grew, software engineers building and testing their own didn’t scale. Instead of rolling out a more traditional testing team, Google started creating specialized engineering roles to help boost the organization’s QA bandwidth holistically.

The book goes on to breakdown testing responsibilities for software engineers (SWEs), software engineers in a test role (SETs), and Test Engineers (TEs). Almost half of the book deals with the roles and responsibilities of the TE, and in the Google model, they do have a higher-level role in testing.
