This book provides an introduction to digital storage for consumer electronics. It discusses the various types of digital storage, including emerging non-volatile solid-state storage technologies and their advantages and disadvantages. It discusses the best practices for selecting, integrating, and using storage devices for various applications. It explores the networking of devices into an overall organization that results in always-available home storage combined with digital storage in the cloud to create an infrastructure to support emerging consumer applications and the Internet of Things. It also looks at the role of digital storage devices in creating security and privacy in consumer products.

The primary purpose of a patent law system should be to enhance economic efficiency, in particular by providing incentives for making inventions. The conventional wisdom is that patents should therefore be strictly exclusive rights. Moreover, in practice patent owners are almost never forced to give up their right to exclude others and receive only a certain amount of remuneration with, for instance, compulsory licensing. Other economically interesting patent-law objectives, however, include the transfer and dissemination of knowledge. Mechanisms exist by which the patent owner decides if he or she would prefer exclusive or non-exclusive rights, for instance the opportunity to declare the willingness to license and create patent pools. But it is questionable whether these mechanisms are sufficient and efficient enough in view of the existence of patent trolls and other problems. This work challenges the conventional wisdom to a certain extent and makes proposals for improvements.

Manufacturing and Engineering Technology brings together around 200 peer-reviewed papers presented at the 2014 International Conference on Manufacturing and Engineering Technology, held in San-ya, China, October 17-19, 2014. The main objective of these proceedings is to take the Manufacturing and Engineering Technology discussion a step further. Contributions cover Manufacture, Mechanical, Materials Science, Industrial Engineering, Control, Information and Computer Engineering. Furthermore, these proceedings provide a platform for researchers, engineers, academics as well as industrial professionals from all over the world to present their research results and development activities in Manufacturing Science and Engineering Technology.

This book constitutes the refereed proceedings of the Third International Symposium on End-User Development, IS-EUD 2011, held in Torre Canne, Italy, in June 2011. The 14 long papers and 21 short papers presented were carefully reviewed and selected for inclusion in the book. In addition the volume contains 2 keynote speeches, 14 doctoral consortia, and information on 3 workshops. The contributions are organized in topical sections on mashups, frameworks, users as co-designers, infrastructures, methodologies and guidelines, beyond the desktop, end-user development in the workplace, meta-design, and supporting end-user developers.

This book provides the foundations for understanding hardware security and trust, which have become major concerns for national security over the past decade. Coverage includes issues related to security and trust in a variety of electronic devices and systems related to the security of hardware, firmware and software, spanning system applications, online transactions and networking services. This serves as an invaluable reference to the state-of-the-art research that is of critical significance to the security of and trust in, modern society's microelectronic-supported infrastructures.

An Industry Perspective on Key Tunable Technologies and Applications Tunable RF Components and Circuits: Applications in Mobile Handsets provides a technical introduction to the state of the art in tunable radio frequency (RF) components, circuits, and applications and discusses the foundational work that has been done to date. Leading practitioners in the field share their expertise on tunable devices in mobile handset applications. Through these practical viewpoints, readers discover how to use tunable RF techniques and devices to develop successful product designs. A substantial portion of the book focuses on antennas and antenna tuning, reflecting the dominance of the antenna tuning application in today's commercial market for tunable RF. The book explains how RF-microelectromechanical systems (RF-MEMS), barium strontium titanate (BST), silicon-on-insulator (SOI) field effect transistors (FETs), and high-performance complementary metal oxide semiconductors (CMOS) are used as enabling technologies for tunable functions in current and next-generation radio architectures. The book also describes power amplifier envelope tracking, an emerging and important technique for improving efficiency; presents a network operator's perspective on the evolution of the handset front end; and explores emerging approaches to production testing of wireless devices.

IT changes everyday's life, especially in education and medicine. The goal of ITME 2014 is to further explore the theoretical and practical issues of Ubiquitous Computing Application and Wireless Sensor Network. It also aims to foster new ideas and collaboration between researchers and practitioners. The organizing committee is soliciting unpublished papers for the main conference and its special

tracks.

This book explores from an English law and Institutional perspective the various types of injunctive relief that are available to a party before and during arbitral proceedings. In particular, this book examines the basis of the power of English Courts to grant such injunctions and explains when such injunctions will be granted. It considers any limitations attached to such injunctions and the relationship between section 44 of the Arbitration Act 1996 and section 37 of the Senior Courts Act 1981. It also provides an in-depth analysis of case law and the emerging trends in this area of arbitration, as well as the powers of arbitrators under the ICC and LCIA Rules to grant such relief and other remedies that might be available to a party seeking to uphold an arbitration agreement. This book will be a vital reference tool for practitioners, arbitrators and postgraduate students.

Building web sites that work for all types of smartphones and tablets, including iPhones, iPads, Android devices, and BlackBerry devices is a skill much in demand as mobile devices outpace both desktop and laptop computers, and this book gets you started. Guides you through creating and optimizing mobile sites with HTML, CSS, and JavaScript Covers HTML5, WebKit extensions, platform variations, accommodating different browsers, security issues, and making mobile sites richer with Flash, graphics, and video Includes code for differences in mobile app design and navigation, including touch devices HTML, CSS, and JavaScript Mobile Web Development For Dummies makes it easy to start developing great sites for mobile devices.

This book is an essential resource for any legal practitioner involved in any aspect of English arbitration law. It provides a thorough annotation of the Arbitration Act 1996, and contains comprehensive explanations of developments in the relevant case law to each section of the Act. Since the fourth edition of this book, the English courts have decided many important new cases on virtually every aspect of arbitration law. The most important developments relate to: The growth of anti-arbitration injunctions; The use of freezing injunctions against third party assets and the availability of anti-suit injunctions in EU proceedings; The definition of seat, the appointment of arbitrators, choice of applicable law, jurisdiction, the form of the award and the slip rule; Enforcement of foreign awards, and challenges to domestic awards by way of jurisdictional attacks, serious irregularity or error of law In this 5th edition, the notes to each section contain helpful sub-headings and a new Appendix will contain a fully annotated version of CPR Part 62 and the Practice Direction. The book will also be useful for academics and university students of law at all levels seeking an understanding of the 1996 Act, including those on the Legal Practice Course.

The five-volume set LNCS 8004--8008 constitutes the refereed proceedings of the 15th International Conference on Human-Computer Interaction, HCI 2013, held in Las Vegas, NV, USA in July 2013. The total of 1666 papers and 303 posters presented at the HCI 2013 conferences was carefully reviewed and selected from 5210 submissions. These papers address the latest research and development efforts and highlight the human aspects of design and use of computing systems. The papers accepted for presentation thoroughly cover the entire field of human-computer interaction, addressing major advances in knowledge and effective use of computers in a variety of application areas. This volume contains papers in the thematic area of human-computer interaction, addressing the following major topics: adaptive, personalised and context-aware interaction; computational vision in HCI; emotions in HCI; biophysiological aspects of interaction.

Drawing upon the expertise of world-renowned researchers and experts, The Cloud Security Ecosystem comprehensively discusses a range of cloud security topics from multi-disciplinary and international perspectives, aligning technical security implementations with the most recent developments in business, legal, and international environments. The book holistically discusses key research and

policy advances in cloud security – putting technical and management issues together with an in-depth treatise on a multi-disciplinary and international subject. The book features contributions from key thought leaders and top researchers in the technical, legal, and business and management aspects of cloud security. The authors present the leading edge of cloud security research, covering the relationships between differing disciplines and discussing implementation and legal challenges in planning, executing, and using cloud security. Presents the most current and leading-edge research on cloud security from a multi-disciplinary standpoint, featuring a panel of top experts in the field Focuses on the technical, legal, and business management issues involved in implementing effective cloud security, including case examples Covers key technical topics, including cloud trust protocols, cryptographic deployment and key management, mobile devices and BYOD security management, auditability and accountability, emergency and incident response, as well as cloud forensics Includes coverage of management and legal issues such as cloud data governance, mitigation and liability of international cloud deployment, legal boundaries, risk management, cloud information security management plans, economics of cloud security, and standardization efforts

The disjuncture between the design intent of the developers of ICTs and the needs of the users has often led to surprising use of new technologies, as users have refused to become mere agents of the designers. Individual users have adopted their own uses of ICTs based on the complex webs of relations and meanings in which they function as social actors. Instead of adjusting these webs to new ICTs, they have fit the ICTs into their pre-existing social webs, often resulting in imaginative and creative uses of new technologies, not envisaged by the original designers. The contributions in this volume provide studies of such integrations of ICTs into the lives of human users, and demonstrate that such uses should not be regarded as 'faulty' or 'mistaken', merely because they 'fail' to meet the expectations of the original designers of the ICTs. Instead, human users should be given precedence over ICTs, and the creative uses of 'universal' technologies by individual users should be emphasised and studied, so as to move towards a better understanding and appreciation of the integration of ICTs into human lives. This book was originally published as special issue of *The Information Society*.

The interaction between a user and a device forms the foundation of today's application design. Covering the following topics: A suite of five structural principles helping designers to structure their mockups; An agile method for exploiting desktop eye tracker equipment in combination with mobile devices; An approach to explore large-scale collections based on classification systems; A framework based on the use of modeling and components composition techniques to simplify the development of organizational collaborative systems; A low-cost virtual reality system that provides highly satisfying virtual experiences; Popular hardware and software tools and technologies for developing augmented and virtual reality applications; An implementation to handle connectivity between virtual reality applications and SensAble® Technology Phantom Haptic Devices; The results of a research study implementing a teaching technological strategy to help Down syndrome children develop their reading skills; Platform independent models decreasing the level of cohesion between communication technologies and software for ubiquitous computing; A method for applying gamification as a tool to improve the participation and motivation of people in performing different tasks. *New Trends in Interaction, Virtual Reality and Modeling* collects the best research from *Interacción 2012* and *Mex-IHC 2012*, and presents the state-of-the-art in human-computer interaction, user interfaces, user experience and virtual reality. Written by researchers from leading universities, research institutes and industry, this volume forms a valuable source of reference for researchers in HCI and VR.

This book is an essential resource for anybody involved in arbitration. It is an updated section-by-section commentary on the Arbitration Act 1996, split into a separate set of notes for each section, and subdivided into the relevant issues within that section. It contains elements of international comparative law, citing authorities from many other common law and civil law jurisdictions. Beyond the development of law since the last edition, this sixth edition contains new practical features to aid the reader. Each section now has a new contents table, with each separate topic set out clearly and in a logical order, which acts as reminder for the reader. Further, each separate topic now has a specific individual reference, and the topics are grouped in a more systematic and logical way within each section, to improve readability. The book is primarily aimed at practitioners of arbitration both in the UK and abroad, including solicitors, barristers, arbitrators and judges who are involved in the practice of arbitration (whether domestic or international). It is also aimed at UK and international students of international arbitration, especially in relation to the sections with comparative legal analysis and comprehensive discussions on the interaction between the Arbitration Act 1996 and institutional arbitration rules. Erratum: The authors regret that the new version of the LCIA Rules will not now be published (or be applicable) until early 2020, due to unexpected circumstances. It is understood that those Articles referred to in the text as the 2019 Rules will remain unchanged, albeit that the Rules when in force should be and will be cited as the 2020 LCIA Rules. The authors accept responsibility for and apologise for this error.
