A " system of equations " is a collection of two or more equations that are solved simultaneously. Previously, I have gone over a few examples showing how to solve a system of linear equations using substitution and elimination methods. It is considered a linear system because all the equations in the set are lines.

Linear equation - Wikipedia

Linear equation can be graphed based on their slope and y-intercept. The standard equation for a line is $y = mx + b$, where m is the slope and b is the y-intercept. Slope can be found with the formula $m = (y_2 - y_1)/(x_2 - x_1)$, which represents the change in y over the change in x .
