A man washes ashore near an old couple's house, barely alive. When he comes to, he has forgotten everything, including his name. The only clues to his identity: a key sewn into his clothes, a bullet wound to the head - and the number XIII tattooed on his shoulder. A meagre start to reconstruct one's self. Before XIII even begins to investigate, though, his past catches up with him, and it is anything but ordinary. The trail is thin and the body count high, but XIII needs to know. Even if, as the outlines of a massive conspiracy start to appear,

some of the truths uncovered seem unpleasant.

Amputation in Literature and Film: Artificial Limbs, Prosthetic Relations, and the Semiotics of "Loss" explores the many ways in which literature and film have engaged with the subject of amputation. The scholars featured in this volume draw upon a wide variety of texts, both lesser-known and canonical, across historical periods and language traditions to interrogate the intersections of disability studies with

social, political, cultural, and philosophical concerns. Whether focusing on ancient texts by Zhuangzi or Ovid, renaissance drama, folktales collected by the Brothers Grimm, novels or silent film, the chapters in this volume highlight the dialectics of "loss" and "gain" in narratives of amputation to encourage critical dialogue and forge an integrated, embodied understanding of experiences of impairment in which mind and body, metaphor and materiality, theory and politics are considered as inter-related and interacting aspects of disability and ability.

This book reviews and analyses the issues and policies of internationalization and exportation of higher education and investigates the strategies and models of education hub development in the context of globalization, with Hong Kong in the Asia-Pacific region as a case study. It examines the close relationship between education hubs and higher education, as well as the strategic functions of an education hub in the future development of a society in a competitive global environment. It also analyses the major strengths, weaknesses, opportunities, and threats of Hong Kong's higher education in relation to its potential for exporting higher education to Asian markets. In particular, it reviews the current state of higher education services

offered by Hong Kong in three target markets and their segmentation and proposes the most appropriate market entry strategies for education service providers.

his brothers see as an excellent opportunity to get rich...

Two opposing views of the future in the Middle Ages dominate recent historical scholarship. According to one opinion, medieval societies were expecting the near end of the world and therefore had no concept of the future. According to the other opinion, the expectation of the near end created a drive to change the world for the better and thus for innovation. Close inspection of the history of prognostication reveals the continuous attempts and multi-fold methods to recognize and interpret God's will, the prodigies of nature, and the patterns of time. That proves, on the one hand, the constant human uncertainty facing the contingencies of the future. On the other hand, it demonstrates the firm believe during the Middle Ages in a future which could be shaped and even manipulated. The handbook provides the first overview of current historical research on medieval prognostication. It considers the entangled influences and transmissions between Christian, Jewish, Islamic, and non-monotheistic societies during the period from a wide range of perspectives. An international team of 63 renowned authors

from about a dozen different academic disciplines contributed to this comprehensive overview.

This book presents a history of shock compression science, including development of experimental, material modeling, and hydrodynamics code technologies over the past six decades at Sandia National Laboratories. The book is organized into a discussion of major accomplishments by decade with over 900 references, followed by a unique collection of 45 personal recollections detailing the trials, tribulations, and successes of building a world-class organization in the field. It explains some of the challenges researchers faced and the

gratification they experienced when a discovery was made. Several visionary researchers made pioneering advances that integrated these three technologies into a cohesive capability to solve complex scientific and engineering problems. What approaches worked, which ones did not, and the applications of the research are described. Notable applications include the turret explosion aboard the USS Iowa and the Shoemaker-Levy comet impact on Jupiter. The personal anecdotes and recollections make for a fascinating account of building a world-renowned capability from meager beginnings. This book will be inspiring to the expert, the non expert, and the early-career scientist. Undergraduate and graduate students in science and engineering who are contemplating different fields of study should find it especially compelling.

This book investigates the gendered dimensions of academic life in the contemporary Australian university. It examines key discourses – most notably academic performativity and identity – through a feminist lens, and scrutinises how discourses of neoliberalism and feminism are entangled in the structure, systems, operations and cul-

tures of the university. Drawing on in-depth qualitative interviews with academic women in Australia, the author uses a mix of experimental methods to emphasise the performative and discursive decisions women make with regard to their academic careers. In doing so, this book reveals how women themselves generate neoliberal and feminist shifts, how they manage the contradictions they produce, and how they carve spaces of influence and authority. Moving towards a re-evaluation of existing discourses, this book offers new insights into gender inequality in the Australian university in neoliberal times.

The 75th adventure of Lucky Luke, and the Old West at its funniest!

Regarded as one of the most important sociological and business commentaries of modern times, *The Organization Man* developed the first thorough description of the impact of mass organization on American society. During the height of the Eisenhower administration, corporations appeared to provide a blissful answer to post-war life with the marketing of new technologies—television, affordable cars, space travel, fast food—and lifestyles, such as carefully planned suburban communities centered around the nuclear family. William H. Whyte found this phenomenon alarming. As an editor for *Fortune* magazine, Whyte was well placed to observe corporate America; it became clear to him that the American belief in the perfectibility of society was shifting from one of individual initiative to one that could be achieved at the expense of the individual. With its clear analysis of contemporary working and living arrangements, *The Organization Man* rapidly achieved bestseller status. Since the time of the book's original publication, the American workplace has undergone massive changes. In the 1990s, the rule of large corporations

seemed less relevant as small entrepreneurs made fortunes from new technologies, in the process bucking old corporate trends. In fact this "new economy" appeared to have doomed Whyte's original analysis as an artifact from a bygone day. But the recent collapse of so many startup businesses, gigantic mergers of international conglomerates, and the reality of economic globalization make *The Organization Man* all the more essential as background for understanding today's global market. This edition contains a new foreword by noted journalist and author Joseph Nocera. In an afterword Jenny Bell Whyte describes how *The Organization Man* was written.

Does Lucky Luke know what he's getting himself into when he arrives at Froggy Town on a stormy night? As in many cities of the Wild West, a handful of men pursue the madcap dream of finding gold. Luke is just looking for a place where he can make a quick stop to replenish his tobacco supplies. But he can't refuse the request for help made by a committee of citizens to

find the gold that was stolen the previous week from the poor miners. With the help of Doc Wednesday, Lucky Luke leads a dangerous investigation while facing up to the ruthless siblings - the Bones brothers. At the close of the Second World War both the RAF and the United States Army Air Forces sent teams of investigators to the continent of Europe to try and assess the effectiveness of Allied strategic bombing. The *British Survey* was originally classified and is published here for the first time. By combining the original Report and an analysis of its strengths and weaknesses, together with a short history of the genesis of the *British Survey*, this work is an important contribution to the continuing historical debate over the effects of the strategic bombing offensive in the Second World War.
