This open access book provides an overview of the recent advances in representation learning theory, algorithms and applications for natural language processing (NLP). It is divided into three parts. Part I presents the representation learning techniques for multiple language entries, including words, phrases, sentences and documents. Part II then introduces the representation techniques for those objects that are closely related to NLP, including entity-based world knowledge, seme-me-based linguistic knowledge, networks, and cross-modal entries. Lastly, Part III provides open resource tools for representation learning techniques, and discusses the remaining challenges and future research directions. The theories and algorithms of representation learning presented can also benefit other related domains such as machine learning, social network analysis, semantic Web, information retrieval, data mining and computational biology. This book is intended for advanced undergraduate and graduate students, post-doctoral fellows, researchers, lecturers, and industrial engineers, as well as anyone interested in representation learning and natural language processing.

When facing a chaotic or threatening situation, fear overwhelms an individual with autism. 'Melt-downs,' or catastrophic reactions, can be scary for the individual with autism, and for the person trying to help if they don't know how to react. Common autistic coping strategies such as hand-flapping or leg-shaking can be misperceived as temper tantrums, and response techniques commonly recommended in times of distress, such as maintaining eye contact or using light touch, can be exacerbating rather than helpful. Using the easy-to-remember S.C.A.R.E.D., coined by clinical psychologist Will Richards, this guide offers strategies and practical techniques that will be a reference tool to anyone in a first response position. The authors have created a training program to explain the autistic experience and mindset, and guide the interventions of first responders to autistic individuals in crisis.

Normal Child and Adolescent Development: A Psychodynamic Primer presents a complete picture of mental development, informed by contemporary research and psychodynamic thinking. Dr. Gilmore and Dr. Meersand have taught human development to psychiatric residents, psychology doctoral students, and psychoanalytic candidates for more than a decade, and found an acute need for accessible material integrating recent findings in the psychodynamic literature and psychology research with information on development as a dynamic interaction of the growing mind (including the unconscious mind), the maturing body, and the evolving demands of environment. The book is their response to this need, and it is as unique as it is useful, as compelling as it is comprehensive. Replete with new ideas and fascinating connections, the volume is also beautifully written and a pleasure to read. The clinical vignettes in the text are vivid narratives that make the child at different stages recognizable and memorable. In addition, online video illustrations reinforce the key characteristics at each phase of normal development. In brief: The authors begin with an introduction to the book's theoretical orientation and end with a brief reprise of the importance of developmental thinking in clinical practice, forming a clear framework for the authors' perspective. The authors use familiar developmental demarcations, informed by current thinking, to present chapters on infancy, toddlerhood, oedipal age, latency, preadolescence, early and mid-adolescence, late adolescence, and the still-controversial phase of emerging adulthood. The section on the oedipal-age child merits two chapters, testament to the authors' belief in the critical nature of this phase, which marks a momentous transition in mental development. Grounded in the belief that an understanding of development is a building block of clinical thinking, the book emphasizes that every patient encounter demands familiarity with developmental concepts, as well as the understanding that past and present are inextricably woven together, and that present consciousness is an amalgam of all experience. The book's multisystem approach shows the complexity and diversity of human development. Truly, Nor-

mal Child and Adolescent Development: A Psychodynamic Primer is a twenty-first century text, and one that both students and practitioners in psychiatry, psychology, and psychoanalysis will welcome as a valuable resource.

HVAC Training 101 is a site visited by over 100,000 enthusiasts monthly, who are interested in becoming HVAC technicians. The site initially began as the passion project of a retired HVAC technician. The site quickly gained popularity, building a strong community of aspiring HVAC technicians. Currently, it is managed by a team of ex-HVAC technicians with decades of experience in the industry. Head over to HVACTraining101.Com to learn more. We began by writing about how to become certified as an HVAC technician. With rules and certifications varying for each state, it was a challenging task. We had a few friends in other states help us out, but for some states, we had to dig really deep to find the information needed. Our audience at the time was very happy with the information we provided. At this point, we started getting many questions about EPA 608 certification. Once you get the education and experience needed to become a technician, prospective employers will ask for certification to handle refrigerants. When we started writing about how to become certified, viewers again requested we write a study guide to help them prepare for the 608 exams. The study guides out there were dense and had much more information than was needed to pass the test. This inspired us to embark on a journey to write the simplest study guide for the EPA 608 exam, which would still cover all the necessary information. We hope we have achieved our intended objective. The journey to becoming an HVAC technician can be long and arduous. We congratulate you on taking this path and wish you the best in cracking the EPA 608 exam.
