If you're looking for advice on how to make a fast buck and get an adrenaline high from investing, this book is not for you. If you're looking to build wealth over time, Kim Shannon covers a common sense approach that Sionna Investment Managers uses to manage money on behalf of its clients. Shannon and her investment team follow a path well-established by the most successful value investors: Benjamin Graham, David L. Dodd, Sir John Templeton, Peter Lynch and the "world's greatest investor," Warren Buffett. However, Sionna has a unique take on value — one that addresses the idiosyncrasies of concentrated markets — like those within Canada. Despite proven success, value investing struggles for respect, particularly

during bubbles and declines when investors take cues from headlines instead of reason and experience. Shannon discusses the psychological impulses underlying mispriced stocks that become unmoored from their intrinsic value. Citing examples, she endorses understanding investment psychology and using relative value to buy illogically discounted shares. Suited for investors at all levels, The Value Proposition reveals Sionna's quantitative and qualitative processes and a "Sherlock Holmes" orientation to reading financial statements and assessing a company's management. After 30 successful years in the hard knocks investment world, Shannon views herself fortunate to have found her calling managing money for institutions and individuals. She describes the unlikely journey that led to an industry that has only recently attracted women. Her account of influential mentors, the merits of staying independent and her creation of a strong Sionna culture make for an engaging and informative read.

"Successful Wall Street fund manager retired at age 35 guides investors to use intuitive and creative right-brained processes to complement traditional left-brain financial analysis. Author describes his principles based on spiritual insights and provides professional anecdotes to support his theories"--Provided by publisher.

At 30, Duncan Bannatyne had no money and was enjoying life on the beaches of Jersey. He saw a story of someone who had made himself a millionaire, and decided to do the same. Five years later he had done it, and now he is worth £168 million. In this remarkable book, Bannatyne relives his colourful path to riches, from ice cream salesman to multi-millionaire, explaining how anyone could take the same route as he did - if they really want to. Hugely articulate, and with numerous fascinating and revealing stories to tell, this is an autobiography and a business book unlike any other - but then Bannatyne isn't like any other businessman, either.

Artificial intelligence (AI) has grown in presence in asset management and has revolutionized the sector in many ways. It has improved portfolio management, trading, and risk management practices by increasing efficiency, accuracy, and compliance. In particular, AI techniques help construct portfolios based on more accurate risk and return forecasts and more complex constraints. Trading algorithms use AI to devise

novel trading signals and execute trades with lower transaction costs. AI also improves risk modeling and forecasting by generating insights from new data sources. Finally, robo-advisors owe a large part of their success to AI techniques. Yet the use of AI can also create new risks and challenges, such as those resulting from model opacity, complexity, and reliance on data integrity.

Diversification is a core principle of investing. Yet money managers have not applied it to their own ranks. Only around 10 percent of portfolio managers—the people most directly responsible for investing your money—are female, and the numbers are even worse at the ownership level. What are the causes of this underrepresentation, and what are its consequences—including for firms' and clients' bottom lines? In *Undiversified*, experienced practitioners Ellen Carr and Katrina Dudley examine the lack of women in investment management and propose solutions to improve the imbalance. They explore the barriers that subtly but effectively discourage women from entering and staying in the industry at each point in the pipeline. At the entry level, the lack of visible role models discourages students from considering the field, and those who do embark on an investment management career face many obstacles to retention and promotion. Carr and Dudley highlight the importance of informal knowledge about how to navigate career tracks, without which women are left at a disadvantage in an industry that lionizes confidence. They showcase a diverse constellation of successful female portfolio managers to demystify the profession. Drawing on wide-ranging research, interviews with prospective, current, and former industry practitioners, and the authors' own experiences, *Undiversified* makes a compelling case that increasing the number of women could help transform active investment management at a time when it is under threat from passive strategies and technological innovation.

There are nearly 5 million SMEs in the UK and they have a crucial role to play if the UK is to achieve export-led recovery. Only a very small number of SMEs have been helped by UK Export Finance (UKEF) with only 21 receiving help from the agency up to August 2012. UKEF services need to be better promoted both to SMEs and banks

who act as the gatekeeper to the scheme. The Committee say that unless banks are prepared to take on some of the risks of lending to exporters then UKEF's programmes are 'dead in the water'. More generally, the transition from loan decisions being made by local bank managers to a centralised process driven by formulae has weakened SME access to bank finance. Local bank managers are much better placed to make informed decisions about loan applications from small local businesses. SMEs must also do more to explore alternative sources of finance to invest in export efforts including non-clearing banks, equity funding and crowd sourcing and UK Trade and Industry (UKTI) must do more to raise awareness of these sources of alternative funding. UKTI do a good job with companies they support but awareness of UKTI is low. The Committee also consider the impact of the Bribery Act 2010 in deterring UK exporters. They say the Act has led to confusion and uncertainty and call for detailed post-legislative scrutiny of the Act

All organizations, whether for profit, not for profit, or government, face issues of information technology management. While the concerns involved may differ from organization to organization, the principles of good information technology management remain the same. Using a compilation of articles on various topics relating to technology management, *Handbook of Technology Management in Public Administration* addresses the management, implementation, and integration of technology across a wide variety of disciplines. The book highlights lessons learned to assist you in solving contemporary problems and avoiding pitfalls. It discusses the creation of innovative paradigms, new boundaries, diversity frameworks, and operational breakthroughs emanating from technology. It also raises questions about the productivity, violence, and intrusions of technology into the personal, organizational, and social environments as we move forward. This book identifies the potential ethical, legal, and social implications of technology from electronic signatures to genetic screenings to privacy interventions to industrial applications. It raises issues, problems, and concerns arising from technology and its effects on nurturing or nullifying the foundations of life and liberty in a constitutional democracy. With the development of new tools and techniques, technology promises to make organizations more productive and efficient. *Handbook of Technology Management in Public Administration* identifies effective technology management approaches while balancing the repercussions of technological growth.

This is not a method book. It is a thinking book. *Warren Buffett: Inside the Ultimate Money Mind* explains the philosophies of self-reliance, stoicism, rationalism, and pragmatism and their contributions to making intelligent investment decisions. It also outlines the evolution of value investing, discusses how to develop a business-driven investing mindset, and describes the defining traits of successful active management. The book includes expert updates from Chartered Financial Analyst (CFA) Institute, in addition to the core text of 1997's first edition – endorsed by investment luminaries Charles Schwab and John Bogle. Presents an approach that places achieving client objectives ahead of investment vehicles. Applicable for self-study or classroom use. Now, as in 1997, *The New Wealth Management* effectively blends investment theory and real world applications. And in today's new investment landscaped, this update to the classic reference is more important than ever.
