(ARDF) Microwave Passive Direction Finding

Microwave Passive Direction Finding unifies direction finding (DF) theory and brings together into a single source wide-ranging information on the technology of measuring the direction-of-arrival of microwave signals. Throughout the material, there is authoritative information useful to preparing a detailed technical proposal for new business that has been compiled from many years of defense industry presentations, reports, and systems development.

This first chapter has introduced the concept of microwave passive direction finding as a science apart from radar receivers, the purpose being to permit a synergistic examination of the theory, antennas, and techniques that constitute the technology. The roots of modern passive direction finding evolved from early HF/VHF and radar methods.
