This text begins by linking the ACOTE Accreditation Standards with current practice in chapters for students and educators, and sets the stage with two foundational concepts vital to the study of occupation: flow and culture. tice. Inside are included: Basic tenets of occupational therapy; Occupational therapy theoretical perspectives; Screening, evaluation, and referral; Formulation and implementation of an intervention plan; Context of service delivery; Context of delivery service; Management of occupational therapy services; Professional ethics, values, and responsibilities; Culture and its role in occupational choice and performance. together to reinforce and facilitate learning.

This book examines the occupational therapy paradigm (its focal viewpoint, core constructs, and values) as well as the role of complexity/chaos theory as a scientific framework for occupational therapy research and practice. Unlike other current OT texts, this book uses clinical case examples to illustrate application of proposed changes to make procedures consistent with the latest Occupational Therapy Practice Framework. The reader walks away with a clear grasp of the theoretical principles guiding his or her treatment interventions, the explanations behind those principles, and the applicable intervention for said techniques and procedures. An emphasis on clinical-reasoning skills, including information on different types of reasoning skills as well as the MAPP model of teaching helps the student and clinician translate theoretical principles into practice. The section on specific interventions addresses each of the conceptual practice models according to a consistent chapter template, which enables the reader to apply conceptual practice

models in real-world contexts. Preview questions at the beginning of each chapter alert the reader to important concepts in the upcoming text. Critical analysis of the theoretical core provides suggested modifications to increase consistency with the new occupational therapy paradigm.

This text provides applicable material to any of the doing portions of the occu-

pational therapy curriculum, fieldwork and workplace that address the use of daily life skills, work and leisure activities as strategies for intervention. The book is sequentially organized from the historical background of occupation as the basis of occupational therapy, to its use as therapeutic intervention.

Beginning with defining the domain of practice through the areas of occupation, students will learn to identify occupations and activities, while learning to understand the importance of analysis to their domain of practice. Students and practitioners will also discover how to analyze the demands inherent to the activity itself, and the context which surround the activity and the people engaged in it. The component steps to analyzing activities or occupations are uncovered in separate chapters, each aspect reinforces concepts that are foundational to occupational therapy practice.
