This latest installment in the *Psychology of Popular Culture* series turns its focus to superheroes. Superheroes have survived and fascinated for more than 70 years in no small part due to their psychological depth. In *The Psychology of Superheroes*, almost two dozen psychologists get into the heads of today's most popular and intriguing superheroes. Why do superheroes choose to be superheroes? Where does Spider-Man's altruism come from, and what does it mean? Why is there so much prejudice against the X-Men, and how could they have responded to it, other than the way they did? Why are super-villains so aggressive? *The Psychology of Superheroes* answers these questions, exploring the inner workings our heroes usually only share with their therapists.

Integrative, research-based, multisystemic: these words reflect not only the state of family therapy, but the nature of this comprehensive handbook as well. The contributors, all well-recognized names who have contributed extensively to the field, accept and embrace the tensions that emerge when integrating theoretical perspectives and science in clinical settings to document the current evolution of couples and family therapy, practice, and research. Each individual chapter contribution is organized around a central theme: that the integration of theory, clinical wisdom,

and practical and meaningful research produce the best understanding of couple and family relationships, and the best treatment options. The handbook contains five parts: • Part I describes the history of the field and its current core theoretical constructs • Part II analyzes the theories that form the foundation of couple and family therapy, chosen because they best represent the broad range of schools of practice in the field • Part III provides the best examples of approaches that illustrate how clinical models can be theoretically integrative, evidence-based, and clinically responsive • Part IV summarizes evidence and provides useful findings relevant for research and practice • Part V looks at the application of couple and family interventions that are based on emerging clinical needs, such as divorce and working in medical settings. *Handbook of Family Therapy* illuminates the threads that are common to family therapies and gives voice to the range of perspectives that are possible. Practitioners, researchers, and students need to have this handbook on their shelves, both to help look back on our past and to usher in the next evolution in family therapy.

Are you truly in danger or has your brain simply "tricked" you into thinking you are? In *The Worry Trick*, psychologist and anxiety expert David Carbonell shows how anxiety hijacks the brain and offers effective techniques to help you break the cycle of worry, once and for all. Anxiety is a powerful force. It makes us question ourselves and our decisions, causes us to worry about the future, and fills our days with dread and emotional turbulence. Based in acceptance and commitment therapy (ACT) and cognitive behavioral therapy (CBT), this book is designed to help you break the cycle of worry. Worry convinces us there's danger, and then tricks us into getting into fight, flight, or freeze mode—even when there is no danger. The techniques in this book, rather than encouraging you to avoid or try to resist anxiety, shows you how to see the trick that underlies your anxious thoughts, and how avoidance can backfire and make anxiety worse. If you're ready to start observing your anxious feelings with distance and clarity—rather than getting tricked once again—this book will show you how.

The perfect supplement to introductory psychology texts, *The Norton Psychology Reader* includes the best contemporary writing on the study of human behavior.

Can a horse really do arithmetic? For a time a great many people thought so, enthralled by the exploits of Clever Hans, a horse that could seemingly answer any question about mathematics, language, and music with stomps of his hoof. Even as celebrated scientists endeavored to discover Hans's secret, people were perfectly comfortable believing something no rational mind should have accepted. How is that possible? In *The Horse That Won't Go Away*, Tom Heinzen, Scott Lilienfeld, and Susan Nolan explore the confounding story of Clever Hans and how we continue to be deceived by beliefs for which there is no supporting logic or evidence. From Clever Hans, to the unsupported claims that facilitated communication could allow persons with autism to communicate, to the exaggerated fear of many parents that their child may be kidnapped (the odds of such an event are astronomical), the authors show just how important it is to rely on the scientific method as we navigate our way through everyday life.

"... an essential examination of how animals assemble the basic tool kit that we call the mind: the ability to count, to navigate, to recognize individuals, to communicate, and to socialize."--Jacket.

The aim of this volume is to discuss recent research into self-experience and its disorders, and to contribute to a better integration of the different empirical and conceptual perspectives. Among the topics discussed are questions like 'What is a self?', 'What is the relation between the self-giveness of consciousness and the givenness of the conscious self?', 'How should we understand the self-disorders encountered in schizophrenia?' and 'What general insights into the nature of the self can pathological phenomena provide us with?' Most of the contributions are characterized by a distinct phenomenological approach. The chapters by Butterworth, Strawson, Zahavi, and Marbach are general in nature and address different psychological and philosophical aspects of what it means to be a self. Next Eilan, Parnas, and Sass turn to schizophrenia and ask both how we should approach and understand this disorder, and, more specifically, what we can learn about the nature of selfhood and existence from psychopathology. The chapters by Blakemore and Gallagher present a defense and a criticism of the so-called model of self-monitoring, respectively. The final three chapters by Cutting, Stanghellini, Schwartz and Wiggins represent anthropologically oriented attempts to situate pathologies of self-experience. (Series B)

This volume examines the contributions of three contemporary theologians -- Rosemary Radford Ruether, Joseph Sittler, and Jurgen Moltmann -- to the development of Christian ecological theology. Against the charge that the Christian tradition is ecologically bankrupt, the author demonstrates the intellectual and spiritual resources available within Christianity for addressing ecological issues. Of particular interest are Ruether's doctrine of God and her emphasis on ecojustice, Sittler's cosmic Christology and reconception of the relation between nature and grace, and Moltmann's doctrine of the Holy Spirit and argument for social trinitarianism. Beyond evaluating the issues raised by Ruether, Sittler, and Moltmann, the author presents sixteen theses or desiderata for any adequate Christian ecological theology.

This volume contains a wide range of exercises that emphasize active learning. Each of the 80-plus exercises is described in a cookbook format that allows the instructor to quickly see the concept underlying the activity, materials needed, and class time required.

Self-help materials have become a prime source of psychological advice for millions of Americans. While many self-help resources provide high-quality information and support, others may be misleading, inaccurate, or even harmful. This indispensable volume reveals which are the good ones, which are the bad ones, and why. Based on the results of 5 national studies involving over 2,500 mental health professionals, the book reviews and rates 600+ self-help books, autobiographies, and popular films. In addition, hundreds of helpful Internet sites are described and evaluated by a clinical psychologist, and valuable listings are provided of national and online support groups. The concluding chapter presents practical guidelines for selecting an effective self-help resource. Addressing 28 of the most prevalent clinical disorders and life challenges--from ADHD, Alzheimer's, and anxiety disorders, to marital problems and mood disorders, to weight management and women's issues--this timely book will be tremendously useful to consumers and professionals alike.

Jill Price has the first diagnosed case of a memory condition called "hyperthymestic syndrome" -- the continuous, automatic, autobiographical recall of every day of her life since she was fourteen. Give her any date from that year on, and she can almost instantly tell you what day of the week it was, what she did on that day, and any major world event or cultural happening that took place, as long as she heard about it that day. Her memories are like scenes from home movies, constantly playing in her head, backward and forward, through the years; not only does she make no effort to call her memories to mind, she cannot stop them. The Woman Who Can't Forget is the beautifully written and moving story of Jill's quest to come to terms with her extraordinary memory, living with a condition that no one understood, including her, until the scientific team who studied her finally charted the extraordinary terrain of her abilities. As we learn of Jill's struggles first to realize how unusual her memory is and then to contend, as she grows up, with the unique challenges of not being able to forget -- remembering both the good times and the bad, the joyous and the devastating, in such vivid and insistent detail -- the way her memory works is contrasted to a wealth of discoveries about the workings of normal human memory and normal human forgetting. Intriguing light is shed on the vital role of what's called "motivated forgetting"; as well as theories about childhood amnesia, the loss of memory for the first two to three years of our lives; the emotional content of memories; and the way in which autobiographical memories are normally crafted into an ever-evolving and empowering life story.

Diagnosing Borderline Personality Disorder (BPD) in young people has long been a tough call for

clinicians, either for fear of stigmatizing the child or confusing the normal mood shifts of adolescence with pathology. Now, a recent upsurge in relevant research into early-onset BPD is inspiring the field to move beyond this hesitance toward a developmentally nuanced understanding of the disorder. The Handbook of Borderline Personality Disorder in Children and Adolescents reflects the broad scope and empirical strengths of current research as well as promising advances in treatment. This comprehensive resource is authored by veteran and emerging names across disciplines, including developmental psychopathology, clinical psychology, child psychiatry, genetics and neuroscience in order to organize the field for an integrative future. Leading-edge topics range from the role of parenting in the development of BPD to trait-based versus symptom-based assessment approaches, from the life-course trajectory of BPD to the impact of the DSM-5 on diagnosis. And of particular interest are the data on youth modifications of widely used adult interventions, with session excerpts. Key areas featured in the Handbook: The history of research on BPD in childhood and adolescence. Conceptualization and assessment issues. Etiology and core components of BPD. Developmental course and psychosocial correlates. Empirically supported treatment methods. Implications for future research, assessment and intervention. The Handbook of Borderline Personality Disorder in Children and Adolescents is a breakthrough reference for researchers and clinicians in a wide range of disciplines, including child and school psychology and psychiatry, social work, psychotherapy and counseling, nursing management and research and personality and social psychology.

"Disciplining the Holocaust examines critics' efforts to defend a rigorous and morally appropriate image of the Holocaust. Rather than limiting herself to polemics about the "proper" approach to traumatic history, Karyn Ball explores recent trends in intellectual history that govern a contemporary ethics of scholarship about the Holocaust. She examines the scholarly reception of Goldhagen's Hitler's Willing Executioners, the debates culminating in Eisenman's Memorial to the Murdered Jews of Europe in Berlin, Lyotard's response to negations of testimony about the gas chambers, psychoanalytically informed frameworks for the critical study of traumatic history, and a conference on feminist approaches to the Holocaust and genocide. Ball's book bridges the gap between psychoanalysis and Foucault's understanding of disciplinary power in order to highlight the social implications of traumatic history."--BOOK JACKET.
