From $X'(1) = -X(1)$, we find that $-c_2\mu^2\sin\mu + c_2\mu\cos\mu = -c_2\mu\cos\mu - c_2\sin\mu$. Hence μ is a solution of the equation $-\mu^2\sin\mu + \mu\cos\mu = -\mu\cos\mu - \sin\mu \Rightarrow 2\mu\cos\mu = (\mu^2 - 1)\sin\mu$. Note that $\mu = \pm 1$ is not a solution and $\cos\mu = 0$ is not a possibility, since this would imply $\sin\mu = 0$ and the two equations have no common solutions.

To verify the solution, we use the chain rule and get $u_x = -\sin x f'(y+\cos x)$. To get started finding Partial Differential Equations Asmar Solutions , you are right to find our website which has a comprehensive collection of manuals listed. Our library is the biggest of these that have literally hundreds of thousands of different products represented.

The function being graphed is the solution (2) with $c = L = 1$: $u(x, t) = \sin^2 x \cos^2 t$. $\sqrt{2}$ in the second frame, $t = 1/4$, and so $u(x, t) = \sin^2 x \cos^2 \pi/4 = 2/2 \sin^2 x$. The maximum of this function (for $0 < x < \pi$) is attained at $x = 1/2$ and is equal to $\sqrt{2}$, which is a value greater than $1/2$. 2 13.
