Complications of Percutaneous Coronary Intervention: The Survival Handbook aims to serve as a reference manual for all cardiologists, particularly those in training, who face life-threatening complications of PCI on a day-to-day basis. Drawing on the background and experience of cardiolo-

gists from both sides of the Atlantic, the book aims to be a valuable, practical, and most of all readable resource for the interventional cardiologist. The principles and practices described in the book will be of interest to all practitioners of interventional catheter procedures, including interventional radiologists, vascular surgeons, and cardiologists. Few medical procedures have evolved as dramatically or as quickly as percutaneous coronary intervention (PCI). From its initial conception, PCI has evolved to become a very complex procedure. Each year in the United States well over 1,000,000 percutaneous coronary intervention procedures are performed. However as the volume and complexity of the procedures being performed has increased, so has the potential for procedural error lead-

ing to life-threatening complications. Knowledge of what complications can occur during PCI and how to deal with them is vital for the practicing cardiologist, and can mean the difference between life and death.

This chapter aims to address the questions of the definition and effective management of spasticity, in order to assist the reader to recognize, assess, and treat people with this impairment. Spasticity is a physiological consequence of an insult to the brain or spinal cord, which can lead to life-threatening, disabling, and costly consequences. It is a common but not inevitable outcome of the upper motor neuron (UMN) syndrome and is characterized by muscle overactivity and high tone spasms, which, if left untreated, will lead to muscle and soft tissue contracture and limb deformity. There have been several attempts to define spasticity. The difficulty reflects the complex features of the syndrome. The most cited definition is by Lance, but does not fulfil all the clinical scenarios seen in clinical practice. The term "spasticity" in the therapeutic world covers the several other features of the UMN

syndrome and, therefore, an all embracing definition is probably required as well. Rates for the prevalence of spasticity in different clinical conditions are variable. This may be due to the presence of many patients with mild spasticity, for whom little or no treatment is required for their condition. However, it is estimated that 38% of patients following stroke develop a degree of spasticity and about 19% require pharmacological treatment. Of these about one-third (5% of the total) will benefit from botulinum toxin injections for focal problems. This chapter will inform the reader about the pathophysiology of spasticity, but also includes the practicalities and principles of management, the delivery of its longer term treatments, and the utilization and measurement of relevant outcomes.

The seventh in a series of congressionally mandated reports on Gulf War veterans health, this volume evaluates traumatic brain injury (TBI) and its association with long-term health affects. That many returning veterans have TBI will likely mean long-term challenges for them and their family members. Further, many veterans

will have undiagnosed brain injury because not all TBIs have immediately recognized effects or are easily diagnosed with neuroimaging techniques. In an effort to detail the long term consequences of TBI, the committee read and evaluated some 1,900 studies that made up its literature base, and it developed criteria for inclusion of studies to inform its findings. It is clear that brain injury, whether penetrating or closed, has serious consequences. The committee sought to detail those consequences as clearly as possible and to provide a scientific framework to assist veterans as they return home.

Social factors have a powerful influence on human health and longevity. Yet the social dimensions of health are often obscured in public discussions due to the overwhelming focus in health policy on medical care, individual-level risk factor research, and changing individual behaviours. Likewise, in philosophical approaches to health and social justice, the debates have largely focused on rationing problems in health care and on personal responsibility. However, a range of events over the past two decades such as the study of modern famines, the global experience of HIV/AIDS, the interna-

tional women's health movement, and the flourishing of social epidemiological research have drawn attention to the robust relationship between health and broad social arrangements. In *Health Justice*, Sridhar Venkatapuram takes up the problem of identifying what claims individuals have in regard to their health in modern societies and the globalized world. Recognizing the social bases of health and longevity, Venkatapuram extends the 'Capabilities Approach' of Amartya Sen and Martha Nussbaum into the domain of health and health sciences. In so doing, he formulates an inter-disciplinary argument that draws on the natural and social sciences as well as debates around social justice to argue for every human being's moral entitlement to a capability to be healthy. An ambitious integration of the health sciences and the Capabilities Approach, *Health Justice* aims to provide a concrete ethical grounding for the human right to health, while advancing the field of health policy and placing health at the centre of social justice theory. With a foreword by Sir Michael Marmot, chair of the WHO Commission on the Social Determinants of Health.

Percutaneous left atrial appendage (LAA) closure is an emerging technology for thromboembolic prevention in patients with atrial fibrillation (AF). The first human implantation of an LAA device occurred in 2001, and since then four devices have received CE mark approval. These devices are being widely used in Europe for LAA closure in patients who are poor candidates for long-term oral anticoagulation. In the US, the WATCHMAN device (Boston Scientific) is anticipated to receive FDA approval imminently for AF patients who are warfarin-eligible. This approval is projected to significantly expand the indications for LAA closures worldwide. Thus, the volume of procedures is anticipated to escalate. This book discusses the epidemiology of AF as a cause of stroke; the use of LAA closure in the reduction of thromboembolism with AF; early surgical approaches and novel surgical devices for LAA closure; and current percutaneous approaches and devices available for LAA closure. The emphasis of this book is on percutaneous technical approaches and contemporary trial results on the leading devices (PLAATO,

WATCHMAN, Amplatzer Cardiac Plug, and LARIAT). It also reviews unapproved devices in development, in both clinical and pre-clinical phases.

This report from the Select Committee on Modernisation of the House of Commons (HCP 282, session 2007-08, ISBN 9780215521675), focuses on regional accountability. The Governance of Britain Green Paper (Cm. 7170, ISBN 9780101717021) put forward proposals for improved democratic accountability and scrutiny of the delivery of public services in the English regions. The Committee, in this report, has concluded that there is clear evidence of an accountability gap at regional level. Regional Development Agencies (RDAs), although accountable to ministers, still conduct many activities that are not subject to a regular, robust scrutiny, and the Committee believes more should be done to monitor the delivery of services. With this in mind, the Committee recommends the establishment of a system of regional select committees, with one select committee for each of the administrative regions in England, with the exception of London. Further, the Committee recommends that up to two regional

grand committee meeting should take place in each session for each of the 8 regions. To avoid an adverse impact on House Members' other commitments, membership of regional committees should consist of 10 Members in total. This report therefore sets out a desirability of establishing new structures within the House of Commons to improve regional accountability and Parliamentary scrutiny.

A landmark in the scientific literature, the Oxford Handbook of Neuroethics presents a pioneering review of a topic central to the biosciences. It breaks new ground in bringing together leading neuroscientists, philosophers, and lawyers to tackle some of the most significant ethical issues that face us now and will continue to do so.

Through the sobering story of Maggie Worthen and her mother, Nancy, this book tells of one family's struggle with severe brain injury and how developments in neuroscience call for a reconsideration of what society owes patients at the edge of consciousness. Drawing upon over fifty in-depth family interviews, the history of severe brain injury from Quinlan to Schiavo, and his participation in landmark clinical

trials, such as the first use of deep brain stimulation in the minimally conscious state, Joseph J. Fins captures the paradox of medical and societal neglect even as advances in neuroscience suggest new ways to mend the broken brain. Responding to the dire care provided to these marginalized patients, after heroically being saved, Fins places society's obligations to patients with severe injury within the historical legacy of the civil and disability rights movements, offering a stirring synthesis of public policy and physician advocacy.

Changing demographics, volatile economics and dwindling resources are among the factors contributing to the need for collective and collaborative

efforts to address the new and evolving challenges in healthcare and biomedicine. This book presents the proceedings of the MEDINFO 2013 conference, held in Copenhagen, Denmark, in August 2013. The theme of the conference is "Conducting medical informatics by converging technologies, conveying sciences and connecting people". The book contains 188 full papers, student papers and vision papers from the conference, as well as posters, tutorials, workshops, panels and demonstrations, selected after review from the 789 submissions received. The contributions explore not only converging multidisciplinary technologies and the rigorous scientific investigations required to explain the nature of complex phenomena, but also the human-centered designs which connect people and are crucial for realizing the immense potential of information and communication technologies in healthcare. Contributions cover four major themes: representing and understanding biomedical knowledge; enhancing care, patient safety and outcome; managing care information and workflow; and enabling cost-effective healthcare. The book will be of interest to all those whose work in-

volves improving health outcomes in populations with varying resources worldwide. There is currently heightened interest in optimizing health care through the generation of new knowledge on the effective-

ness of health care services. The United States must substantially strengthen its capacity for assessing evidence on what is known and not known about "what works" in health care. Even the most sophisticated clinicians and consumers struggle to learn which care is appropriate and under what circumstances. *Knowing What Works in Health Care* looks at the three fundamental health care issues in the United States—setting priorities for evidence assessment, assessing evidence (systematic review), and developing evidence-based clinical practice guidelines—and how each of these contributes to the end goal of effective, practical health care systems. This book provides an overall vision and roadmap for improving how the nation uses scientific evidence to identify the most effective clinical services. *Knowing What Works in Health Care* gives private and public sector firms, consumers, health care professionals, benefit administrators, and others the authoritative, independent information required for making essential informed health care decisions.

When two college co-eds on summer break are invited to a bondage-themed party at an expansive beachfront mansion by an attractive couple in their 30's, they are intrigued and decide to attend. Upon their arrival, not only are they placed in tight restraint, they are informed that they will be active participants in many different scenarios - whether they wish to or not. We follow Megan as she is separated from her friend Jill and put in different situations, each of which open her eyes to both new levels of discomfort, humiliation - and excitement. Megan cannot understand why she gets more and more aroused as she is used as a tool of sexual gratification by other men and women. Her protests (during the brief moments when her mouth is not stuffed by a gag) are ignored and her struggles are met with amused smiles, as she has no way to free

herself. She only understands that the ropes, clamps, plugs, and other devices that decorate her voluptuous body give her more pleasure than pain as she is made to perform as others wish. Each situation progressively becomes more intense, with greater punishments driving Megan to the very point of orgasm, even as she continues to question the reasons for her arousal. Her tormentors, Ryan and Ellen, recognize this, and push her harder and faster, to the point that she breaks down as she recognizes and accepts her submissive nature. After she has broken, they approach her and tell her that the true reason they brought her here will soon be revealed. Megan is confused...wasn't the point of bringing her here to teach about her desire to serve and be used by others? She is shocked when she finally learns the truth. The question is, how will she respond?
