Polyethylene glycol electrolyte solution is a laxative solution that stimulates bowel movements. This medication also contains min-

erals to replace electrolytes that are passed from the body in the stool. Polyethylene glycol electrolyte solution is used to clean the bowel before colonoscopy, a barium x-ray, or other intestinal procedures.

The polyethylene glycol (PEG) and electrolytes solution is used to cleanse the colon (bowel) before certain medical tests (eg, colonoscopy, barium enema X-ray exam) or colon surgery. The PEG-electrolyte solution is a laxative. It works by causing you to have diarrhea to clean your colon.

Production. Polyethylene oxide, or high-molecular weight polyethylene glycol, is synthesized by suspension polymerization. It is necessary to hold the growing polymer chain in solution in the course of the polycondensation process. The reaction is catalyzed by magnesium-, aluminium-, or calcium-organoelement compounds.

### Polyethylene glycol - Wikipedia

All Answers ( 4) For a 40% w/v solution, dissolve 40g of PEG 8000 in water or buffer and adjust the volume to 100 mL. For a 40% w/w solution, mix 40g PEG 8000 with 60g water or buffer until you have a solution. Usually in crystallization the % (w/v) annotation is used so that would be 20 g dissolved to an end volume of 50 ml.
