The ISI is usually between 0.94 and 1.4 for more sensitive and 2.0-3.0 for less sensitive thromboplastins. [5] [6] [7] The INR is the ratio of a patient's prothrombin time to a normal (control) sample, raised to the power of the ISI value for the analytical system being used.

### Prothrombin time - Wikipedia

3 Point Estimating is a 3-Step Process. 1. First, you work with the team member assigned to each task and identify both the positive and negative risks involved in their task. Negative risks are the things that could make it take more time and positive risks are the things that could make it take less time. 2.
