queen rearing Queen rearing vs queen breeding A tweet from the Sheffield Honey Company reminded me that I should clarify the difference between queen rearing and queen breeding—and they are absolutely right. Most of us who rear queens do it to provide serviceable queens for ourselves or others.

~~Queen rearing vs queen breeding—Honey Bee Suite~~

Rearing and breeding bees. Rearing bees is not the same as breeding bees. Rearing bees is about queen rearing and colony division. Queen rearing is the process of developing a new queen at the choice of the beekeeper rather than allowing this to be the choice of the bees. The beekeeper may want more queens;

~~Bees for development | Rearing and breeding bees~~

The Miller Method is a queen-rearing process that requires no special equipment and is perfect for the backyard beekeeper who just wants to raise a few queens. Here's how it works: First, take a deep frame with wax foundation and cut the bottom edge of the foundation into a saw tooth pattern.

~~How to Raise a Queen Bee with the Miller Method—dummies~~

I was married in 2009 to my lovely English wife Lucy and we have since started up our own company specialising in queen rearing and selling Queens, Nucs and Honey. An essential part of our business is raising queens and breeding bees for sale during the spring and summer months.

~~Breeding | Honey Bee Suppliers V&L Honeymakers~~

Insert the (now ripe) queen cells into nucs—push the plastic cup gently into the wax such that the cell hangs over brood, cell cup up, cell hanging down vertically. In cold weather, cells must be placed in contact with brood in the center of the cluster or the bees may let them chill. Queens usually emerge on day 12, but may start today.

~~Small-scale Queenrearing—Scientific Beekeeping~~

8 - 9 days from the oldest larva that can become a queen 7 days: brood can no longer be raised into a queen 7 days: unsealed queen cells will not emerge in this time There are three parts to the operation: Preparation - getting the cell raising colony in the right condition to raise the queens. Cell raising - raising the cells you want

~~Simple Queen Rearing—honey, bee~~

As beekeepers, we are equally interested and fascinated by the process of queen-rearing and many of us hold strong views when it comes to queen-raising, queen origins, bee races and colony traits. The reality, however, is that most beekeepers in the country depend heavily on queens produced by somebody else, or indeed on queens imported from over seas.

~~BBKA News—Queen Rearing | British Beekeepers Association~~

Bee breeding and queen rearing are not the same, but many beekeepers think they are. Queen rearing is the process of producing queen honey bees by whatever method is chosen by the beekeeper, whereas breeding is the process of selection that brings about the lines to be propagated by queen rearing and any culling that is carried out.

~~Bee Breeding Methods & Techniques—Dave Cushman~~

Queen rearing equipment A selection of grafting tools, queen cups and equipment for breeding, marking and raising queen bees Filter Results by: Items starting with ...

~~Queen-bee breeding equipment~~

One of the joys of beekeeping is rearing queens. From late April, onwards we select the best queens and eggs/small larvae are taken from their hives for the production of queencells. This is generally referred to as grafting but the better term is 'larval transfer' as that's what we do. Our chosen technique is often queen-right queen-rearing.

~~Browston Apiary—Queen Rearing~~

Queen and Honey specialises in Queen Bee Rearing. We rear Apis mellifera ligustica - Italian Queen Bees and are based in Wagga Wagga. With 22 years of experience in honey production, queen rearing and managing a successful apiary, we strive to always deliver optimum quality in all aspects

of beekeeping.
